PREFACE

This part of Volume I presents statistics on the general characteristics of dwelling units for continental United States, regions, and geographic divisions, as well as summaries of the statistics for the States and the District of Columbia, standard metropolitan areas, cities of 100,000 inhabitants or more, and urbanized areas. The data are based on tabulations from the 1950 Census of Housing, taken as of April 1, 1950. Authorization for the 1950 Census of Housing as part of the decennial census was provided by the Housing Act of 1949. This act, which was approved July 15, 1949, provided that "The Director of the Census is authorized and directed to take a census of housing in each State, the District of Columbia, Hawaii, Puerto Rico, the Virgin Islands, and Alaska, in the year 1950 and decennially thereafter in conjunction with, at the same time, and as a part of the population inquiry of the decennial census in order to provide information concerning the number, characteristics (including utilities and equipment), and geographical distribution of dwelling units in the United States. The Director of the Census is authorized to collect such supplementary statistics (either in advance of or after the taking of such census) as are necessary to the completion thereof."

Volume I, *General Characteristics*, contains data on practically all subjects enumerated in the 1950 Census of Housing. Chapters in this volume were published first as a series of bulletins, Series H-A. Bulletins were published for the United States, each State and the District of Columbia, Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States.

The statistics in this chapter (Part 1 of Volume I) are summarizations or compilations of data from the individual State chapters. In the State chapters (Parts 2 to 6), statistics are presented for the State by residence (urban, rural non-farm and rural farm), standard metropolitan areas, urbanized areas, counties, urban places, places of 1,000 to 2,500 inhabitants, and rural-nonfarm and rural-farm portions of counties. In the chapters for Alaska, Hawaii, Puerto Rico, and the Virgin Islands (Part 7), data are presented for areas comparable to those for the States.

The materials and statistics in this volume were prepared under the direction of Howard G. Brunsman, Chief, Population and Housing Division, and Wayne F. Daugherty, Assistant Chief for Housing. Edwin D. Goldfield assisted in coordinating the census programs. The planning and development of the statistical content of the volume were under the supervision of Robert C. Hamer, assisted by Floyd D. McNaughton and Nathan Krevor; the text was prepared by Carl A. S. Coan and Beulah Washabaugh.

The compilation of the statistics was under the direction of Robert B. Voight and supervised by Morton A. Meyer and Milton D. Lieberman, assisted by Sigmund Schor, Percival J. Ableman, and Ruth T. Stanton. Sampling procedures were under the supervision of Joseph Steinberg, assisted by Joseph Waksberg and Albert Mindlin. The technical editorial work was under the supervision of Mildred M. Russell, assisted by Dorothy M. Belzer.

The collection of the information on which these statistics are based was under the direction of Lowell T. Galt, then Chief, Field Division. The organization and operation of the field service were under the supervision of John M. Bell, Assistant Chief for Operations, assisted by Charles F. Haas. The planning and procedures of the field program were under the supervision of Jack B. Robertson, then Assistant Chief for Programs, assisted by Leon S. Geoffrey and Harold Nisselson. Training materials, including visual aids, were prepared under the supervision of James G. Stockard, assisted by Elizabeth T. Gardiner.

Tabulations were under the direction of C. F. Van Aken, Chief, Machine Tabulation Division, and supervised by Morton Boisen, assisted by Ralph E. Mullendore, Betty S. Mitchell, and Maurice C. Fletcher. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the direction of Clarence E. Batschelet, Chief, Geography Division. Robert H. Brooks of the Administrative Service Division was responsible for the printing arrangements. Other members of the staff have made significant contributions to the conduct of the housing census and to the materials presented in this volume.

The Technical Advisory Committee on Housing Statistics advised the Bureau on the selection of subjects, concepts, and definitions to be used in the housing census. The Bureau staff called upon members of the committee for advice throughout all the stages of planning, and their counsel and guidance have been invaluable in developing the census program. Those who served on the committee were: Ernest M. Fisher, Chairman, E. Everett Ashley, III, L. Durward Badgley, Lawrence N. Bloomberg, Roy J. Burroughs, Malcolm B. Catlin, Miles Colean, Donald R. G. Cowan, F. Stuart Fitzpatrick, Leo Goodman, Shirley K. Hart, Lyman Hill, Ethel D. Hoover, Paul F. Krueger, Richard U. Ratcliff, Bert Seidman, Allan F. Thornton, Allan A. Twichell, Warren J. Vinton, and Max S. Wehrly.

In addition to those of the present staff, important contributions to the general planning of the 1950 Census were made by the late J. C. Capt, Director of the Census until his retirement on August 17, 1949, and Dr. Philip M. Hauser, Acting Director until March 9, 1950.

U. S. CENSUS OF HOUSING: 1950

Volume

- I General Characteristics (comprising Series H-A bulletins)
 - II Nonfarm Housing Characteristics (comprising Series H-B bulletins)
 - III Farm Housing Characteristics
 - IV Residential Financing
 - V Block Statistics (comprising Series H-E bulletins)
- Housing statistics for census tracts are included in Population Series P-D bulletins.

U. S. CENSUS OF POPULATION: 1950

Volume

- I Number of Inhabitants (comprising Series P-A bulletins)
- II Characteristics of the Population (comprising Series P-A, P-B, and P-C bulletins)
- III Census Tract Statistics (comprising Series P-D bulletins)
- IV Special Reports (comprising Series P-E bulletins): Employment Characteristics, Occupational and Industrial Characteristics, Characteristics of Families, Marital Status, Institutional Population, Nativity and Parentage, Nonwhite Population by Race, Persons of Spanish Surname, Puerto Ricans in Continental United States, State of Birth, Mobility of the Population, Characteristics by Size of Place, Education, Fertility.

HOUSING VOLUME I

This volume comprises 7 parts, with the States arranged alphabetically and followed by Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States. Data for the United States and for each State (Territory or possession) are presented as separate chapters. The areas included in each part, by chapter number, are as follows:

Part 1

- 1. United States Summary

Part 2

- 2. Alabama
- 3. Arizona
- 4. Arkansas
- 5. California
- 6. Colorado
- 7. Connecticut
- 8. Delaware
- 9. District of Columbia
- 10. Florida
- 11. Georgia

Part 3

- 12. Idaho
- 13. Illinois
- 14. Indiana
- 15. Iowa
- 16. Kansas
- 17. Kentucky
- 18. Louisiana

Part 3—Continued

- 19. Maine
- 20. Maryland
- 21. Massachusetts

Part 4

- 22. Michigan
- 23. Minnesota
- 24. Mississippi
- 25. Missouri
- 26. Montana
- 27. Nebraska
- 28. Nevada
- 29. New Hampshire
- 30. New Jersey
- 31. New Mexico
- 32. New York

Part 5

- 33. North Carolina
- 34. North Dakota
- 35. Ohio
- 36. Oklahoma

Part 5—Continued

- 37. Oregon
- 38. Pennsylvania
- 39. Rhode Island
- 40. South Carolina
- 41. South Dakota
- 42. Tennessee

Part 6

- 43. Texas
- 44. Utah
- 45. Vermont
- 46. Virginia
- 47. Washington
- 48. West Virginia
- 49. Wisconsin
- 50. Wyoming

Part 7

- 51. Alaska
- 52. Hawaii
- 53. Puerto Rico
- 54. Virgin Islands of U. S.

United States Summary

GENERAL CHARACTERISTICS

GENERAL

CONTENT

Volume I of the Housing reports presents basic statistics relating to practically all subjects for which information was collected in the Census of Housing, taken as of April 1, 1950. The dwelling unit is the reporting unit in the housing census.

This volume is arranged by chapters and is bound in seven parts. Part 1 consists of the United States Summary; Parts 2 to 6 contain the separate chapters for the States and the District of Columbia; and Part 7 comprises the chapters for Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States.

In the State chapters, statistics are presented for the State by residence (urban, rural nonfarm, and rural farm) and for the following types of areas within the State: standard metropolitan areas, urbanized areas, counties, urban places, places of 1,000 to 2,500 inhabitants, and rural-nonfarm and rural-farm portions of counties. Characteristics are not shown if the base consists of fewer than three dwelling units in order to avoid disclosure of information for individual units.

The United States Summary contains data for continental United States. It provides statistics for the United States as a whole, the four regions (Northeast, North Central, South, and West), and the nine groups of States designated as "geographic divisions," as well as summaries of the statistics for the States and the District of Columbia, standard metropolitan areas, cities of 100,000 inhabitants or more, and urbanized areas. In addition, there is included in the summary a discussion of the 1950 Census results and some historical data for comparative purposes. In the United States tables, the data are presented by urban, rural-nonfarm, and rural-farm residence. The State data in the United States Summary are summarizations of practically all the State figures in the individual chapters except the data by residence and the data on the characteristics of nonwhite households. The data for the standard metropolitan areas and large cities are summarizations of all the figures appearing in the State chapters for those areas, except the data on the characteristics of dwelling units occupied by nonwhite households (and Spanish-surname households). Statistics for urbanized areas are limited to a summary of selected items from the basic distributions which appear in the State chapters. However, separate statistics for the urban, rural-nonfarm, and rural-farm portions of the State; counties; urban places of fewer than 100,000 inhabitants; places of 1,000 to 2,500 inhabitants; and the rural-nonfarm and rural-farm portions of counties appear only in the individual State chapters.

Statistics are presented in Volume I for the following subjects:

Occupancy characteristics
Occupancy and tenure
Race and color of occupants
Population per occupied dwelling unit
Number of persons
Persons per room

Structural characteristics

Number of rooms
Type of structure
Year built

Condition and plumbing facilities

Condition and plumbing facilities in combination
Water supply
Toilet facilities
Bathing facilities

Equipment and fuels

Electric lighting
Radio
Television
Refrigeration equipment
Kitchen sink
Heating equipment
Heating fuel
Cooking fuel

Financial characteristics of nonfarm dwelling units

Contract monthly rent
Gross monthly rent
Value
Mortgage status

Some housing characteristics are presented separately for owner-occupied, renter-occupied, and nonseasonal not dilapidated vacant dwelling units for rent or sale. For all States, limited data on the characteristics of dwelling units occupied by nonwhite households are presented for the State totals. In addition, in the chapters for the States in the South, data for nonwhite households are provided for areas having 250 or more such households.

In five Southwestern States (Arizona, California, Colorado, New Mexico, and Texas), data for Spanish-surname households are included in the State chapters for areas having 250 or more such households. A special Population report, "Persons of Spanish Surname," includes State totals of selected housing data for the five States.

The enumeration and publication of some subjects were restricted to specific segments of the dwelling unit inventory. In particular, the following subjects were restricted to occupied dwelling units: race and color of occupants, number of persons, persons per room, radio, television, refrigeration equipment, kitchen sink, heating equipment, heating fuel, and cooking fuel. Financial characteristics were enumerated only for nonfarm dwelling units—rent was obtained for renter-occupied units and vacant units for rent, mortgage status for owner-occupied units, and value for owner-occupied units and vacant units for sale. Seasonal status and "for rent or sale" status were obtained only for vacant units.

ARRANGEMENT OF TABLES

In the State chapters, the tables are arranged by type of area, the figures in the tables for the larger areas being presented in greater detail than those for the smaller areas. Table 1 presents a summary of selected characteristics for the State by residence (urban, rural nonfarm, and rural farm), standard metropolitan

areas, urban places of 10,000 inhabitants or more, and counties. Tables 2 to 16 provide totals for the State and for the urban, rural-nonfarm, and rural-farm portions of the State. Data for standard metropolitan areas and their constituent counties, urbanized areas, and urban places of 10,000 inhabitants or more are provided in tables 17 to 21 in approximately the same detail as for the State as a whole. Less detail is presented in tables 22 to 33 for urban places of 2,500 to 10,000 inhabitants, places of 1,000 to 2,500 inhabitants, counties, and the rural-nonfarm and rural-farm portions of counties. Additional tables provide statistics for non-white households in the South and for Spanish-surname households in five Southwestern States (Arizona, California, Colorado, New Mexico, and Texas).

The tables in the United States Summary also are arranged by type of area and correspond in content to tables in the State chapters. The subjects in table 1 (for the United States, regions, divisions, and States) and table 32 (for urbanized areas) in the United States Summary correspond to the subjects in table 1 of the State chapters. Tables 2 to 16 for the United States totals (by urban, rural-nonfarm, and rural-farm residence) correspond to tables 2 to 16 for the State totals in the State chapters. Tables 17 to 31 of the United States Summary comprise three series of tables, with the subjects in each series corresponding to those in tables 17 to 21 in the State chapters. In the United States Summary, tables 17 to 21 contain data for regions, divisions, and States; tables 22 to 26, standard metropolitan areas; and tables 27 to 31, cities of 100,000 inhabitants or more.

In addition to the tables described above, the United States Summary includes text tables A to T. Tables F to T contain the more significant comparative statistics available from previous censuses, as well as selected data from the 1950 Census.

The subjects presented in the tables by type of area are shown in tabular form on p. vii.

SUBJECTS ENUMERATED ON A SAMPLE BASIS

Statistics on most of the subjects are based on complete enumerations. Some of the data, however, are based on information obtained from samples of 20 percent of the dwelling units. The subjects obtained on a sample basis, "Year built" and "Equipment and fuels," are identified in the tables by asterisks. The differences between the estimates from the samples and data which would have been obtained from complete counts are not large enough to have a significant effect on most uses of the data.

For sample items, the category "Not reported" is omitted from the tables; both number and percent distributions are based on the number reporting. As a result of the method used in deriving estimates based on the sample, "Number reporting," in some cases, will be somewhat larger than the 100-percent count of dwelling units. For a description of the sample and estimates of sampling variability, see the section on "Reliability of data."

COMPARABILITY WITH 1940 CENSUS OF HOUSING

In general, the scope of the subject matter covered in the 1950 Census of Housing is the same as in the 1940 Census. Some items, however, were not enumerated in both 1940 and 1950. Information on kitchen sink and on television was collected in 1950, but not in 1940. On the other hand, information was collected in 1940 on conversion, exterior material, estimated rentals of owner-occupied homes, and value and rent of farm dwellings, but was not collected in 1950. Moreover, some information for structures was included in the 1940 Housing reports, while the 1950 data have been tabulated only for dwelling units.

Besides these modifications in scope, there have been several changes in concepts and definitions from the 1940 Census. Departures from the 1940 procedures were adopted after consultation with users of housing census data in order to increase the useful-

ness of the statistics, even though it was recognized that comparability might be adversely affected in some cases. Changes in definitions and procedures are described in the section on "Definitions and explanations."

For most of the subjects, the 1940 and the 1950 data are comparable. In some cases, only rough comparisons are possible and these should be made with caution. Basic data from the 1940 Census of Housing are contained in Volume II, *General Characteristics*, 1940 Housing reports.

HOUSING DATA FROM OTHER CENSUSES

Although the 1940 Census of Housing was the first census of housing, data on a few housing characteristics were collected in earlier years in conjunction with decennial censuses of population and agriculture.

Statistics on the number of "families," "private families," or "homes," and the "population per family" may be derived from earlier censuses of population. The count of families (including quasi-family groups for some censuses) are available for each census year since 1850. In addition, comparable statistics by color of head are available for each census year since 1890, except for 1910. The classification of homes by tenure has been reported since 1890; and the number and characteristics of owned homes that were encumbered were included in the censuses from 1890 to 1920. Value and monthly rent of nonfarm homes and the number of families having a radio were included for the first time in the 1930 reports. Although concepts and procedures were not identical from census to census, the differences are not great enough to invalidate comparisons of the data.

The Census of Agriculture in 1920 and in 1930 reported the number of farm operators' dwellings that were lighted by electricity, the number with water piped into the dwelling, and (for 1930 only) the number with water piped into a bathroom. The value of farm dwellings also was obtained in 1930. These statistics are only roughly comparable with the statistics for corresponding subjects as presented for rural-farm dwelling units in 1940 and in 1950 because the data from the agriculture census represent the homes of farm operators only, whereas the figures from the 1940 and 1950 Censuses of Housing include all dwelling units classified as on farms.

HOUSING REPORTS

The principal findings of the 1950 Census of Housing are published in five volumes:

Volume I, *General Characteristics*, is the basic publication. Each chapter is available as a separate bulletin, Series H-A.

Volume II, *Nonfarm Housing Characteristics*, presents analytical data on housing and household characteristics for occupied dwelling units in the nonfarm segment of the dwelling unit inventory. The data generally are cross-tabulations of housing characteristics, such as contract rent or value by condition of the dwelling unit and by type of structure. In addition, the volume presents tabulations of housing characteristics in relation to characteristics of occupants, such as income, and sex and age of the household head. Statistics are presented as a separate chapter for the United States, for each of the 9 geographic divisions, and for each of the 152 standard metropolitan areas of 100,000 inhabitants or more in the United States. Data for the 106 cities of 100,000 inhabitants or more are included in the chapter for the standard metropolitan area in which the city is located. Each of the chapters is available as a separate bulletin, Series H-B, "Nonfarm Housing Characteristics."

Volume III, *Farm Housing Characteristics*, contains analytical data for occupied dwelling units in the rural-farm segment of the dwelling unit inventory. The tables present interrelationships of number of rooms and condition and plumbing facilities with

selected housing and household characteristics. These statistics are provided for the United States and for each of the 119 economic subregions. Subregions usually are combinations of two or more counties having relatively homogeneous agricultural conditions. A subregion need not lie entirely within a State or within region or division boundaries.

Volume IV, *Residential Financing*, presents statistics relating to the characteristics of the financing of residential nonfarm properties. Data are presented in terms of mortgaged properties, first and junior mortgages, and outstanding mortgage debt for both owner-occupied and rental properties. Items presented include: type of mortgage holder, characteristics of first and junior mortgages, purpose of financing and refinancing, characteristics of the owner-occupant and his household, and the physical and financial characteristics of the property. These statistics are provided for the United States, for each of the 4 regions, and for each of the 25 largest standard metropolitan areas according to the 1940 population.

Volume V, *Block Statistics*, comprises the Block Statistics bulletins (Series H-E). Separate bulletins were issued for the 209 cities in the United States which had 50,000 inhabitants or more in 1940, or in a subsequent special census prior to 1950. These bulletins will not be assembled into a bound volume. Each report presents for the city, by blocks, tabulations of dwelling units for the following subjects: occupancy and tenure, condition and plumbing facilities, persons per room, color of occupants, average contract monthly rent of renter-occupied and selected vacant units, and the average value of 1-dwelling-unit owner-occupied and selected vacant structures. Statistics are summarized for census tracts or—in the absence of tracts—for wards. These bulletins contain the only statistics for wards that will be published from the 1950 Census of Housing.

Detailed housing data, as well as population data, for each of the census tracts in tracted areas are contained in Volume III of the Population reports, comprising the Census Tract bulletins (Series P-D). These bulletins will not be assembled into a bound volume. The housing subjects presented include: occupancy and tenure, color of occupants, type of structure, condition and plumbing facilities, year built, number of persons, persons per room, heating fuel, refrigeration equipment, television, contract monthly rent of renter-occupied and selected vacant units, and value of 1-dwelling-unit owner-occupied and selected vacant structures.

POPULATION REPORTS

The major portion of the information compiled from the Census of Population of 1950 is contained in Volume II, *Characteristics of the Population*. Reports for each State are bound as a part with three chapters: "Number of Inhabitants," "General Characteristics," and "Detailed Characteristics." Each of the chapters is available as a separate bulletin.

PRELIMINARY AND ADVANCE REPORTS

Preliminary and advance reports from the 1950 Census of Housing were issued in Series HC-1 to HC-9.

Preliminary counts of dwelling units, based on tabulations made in the Bureau of the Census field offices, were issued in Series HC-1 for the States (by counties and places of 5,000 inhabitants or more) and in Series HC-2 for Alaska, Hawaii, Puerto Rico, and the Virgin Islands of the United States.

Preliminary data based on samples of dwelling units were published in three series of reports—Series HC-3 for selected standard metropolitan areas, Series HC-4 for the 10 States with the largest population in 1940, and Series HC-5 for the United States and regions. These preliminary figures, which are for the most part replaced by data in Volume I, differ somewhat from the

final figures because they do not include all of the refinements that result from the careful examination of the schedules and tables prior to the publication of the final data. Furthermore, the tabulations of the preliminary data are subject to sampling variability.

Special tabulations for local housing authorities, which were made on a reimbursable basis, were published in the Series HC-6 reports for 219 areas. The tabulations relate to housing and population characteristics and income of families living in dwelling units defined as substandard by the Public Housing Administration. Data for most of the areas were based on a sample of dwelling units.

The advance reports published in Series HC-7, HC-8, and HC-9 were based on final tabulations from the 1950 Census of Housing. The HC-7 reports contain basic counts of vacant dwelling units by States. The HC-8 reports present a summary of selected housing characteristics for each State. Both the HC-7 and HC-8 reports include statistics for standard metropolitan areas and for urban places of 10,000 inhabitants or more. Reports in the HC-9 series present statistics from all of the Housing volumes.

AVAILABILITY OF UNPUBLISHED DATA

In general, the statistics for the larger areas are published in greater detail than those for the smaller areas. However, data for most of the smaller areas have been tabulated in the same detail as for the larger areas. Such statistics not published in the State chapters can be made available, upon request, for the cost of transcription or reproduction. For a complete listing of tabulated, but unpublished, statistics for these areas, see U. S. Bureau of the Census, *U. S. Censuses of Population and Housing: 1950, Key to Published and Tabulated Data for Small Areas*, Washington, D. C., 1951.¹ An estimate of the cost of providing unpublished data will be made upon request to the Director, Bureau of the Census, Washington 25, D. C.

MAPS

Each of the State chapters contains (a) a map of the State showing the outlines of counties and standard metropolitan areas, and the location of cities of 25,000 inhabitants or more, and (b) a map showing the boundaries of the urbanized areas in the State.

A map of the United States showing the outlines of the States and the location of the 168 standard metropolitan areas and a map showing the boundaries of the regions and divisions are on pp. viii and ix of this volume.

SCHEDULES AND INSTRUCTIONS

An illustrative example of the housing schedule used in the enumeration is reproduced in the appendix of the United States Summary. The same schedule was used for enumerating both occupied and vacant dwelling units, and the enumerators were instructed to omit inapplicable items.

The census enumerators were supplied with written instructions as to the method of canvassing their districts and filling out the schedule. These instructions included the *Enumerator's Reference Manual, 1950 Census of the United States*, which contains detailed operational definitions and illustrations of the classifications presented in the Housing volumes, and the *Enumerator's Workbook*, which contains condensed instructions and practice exercises for training purposes. Film strips with accompanying narratives also were among the principal materials used in the training of the enumerators. Instructions from the *Enumerator's Reference Manual* are reproduced in the appendix of the United States Summary following the illustration of the housing schedule.

DEFINITIONS AND EXPLANATIONS

URBAN AND RURAL RESIDENCE

A new definition was adopted for use in the 1950 Census in response to requests from many users of census data for a more realistic classification by urban and rural residence.

According to the 1950 definition, urban housing comprises all dwelling units in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages, (b) incorporated towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin, where "towns" are simply minor civil divisions of counties, (c) the densely settled urban fringe around cities of 50,000 inhabitants or more, including both incorporated and unincorporated areas, and (d) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining dwelling units are classified as rural. According to the 1940 definition, urban housing was limited to all dwelling units in incorporated places of 2,500 inhabitants or more and in a relatively few areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the 1940 definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places classified as urban under special rules. Even with those rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes.

The net effect of the change in the urban-rural definition has been to transfer a considerable number of dwelling units from a rural to an urban classification. This shift has resulted in a more homogeneous grouping of dwelling units than under the 1940 definition. There is a wide range of variation in the impact of this change on the statistics for the various States. For the States of Massachusetts and Rhode Island, in fact, the change results in a reduction in the urban total. Only a portion of some of the towns in these States was within an urban fringe or unincorporated urban place, but the entire towns were classified as urban under the 1940 rule. The net effect of the change in the urban-rural classification on population counts is shown in Population Volume I and in Population Volume II, Chapter 1, for the respective State or the United States.

The rural classification comprises a variety of residences, such as isolated homes in the open country, dwelling units in villages and hamlets of fewer than 2,500 inhabitants, and some dwelling units in the areas surrounding urban places of fewer than 50,000 inhabitants.

FARM AND NONFARM RESIDENCE

In the 1950 Census, the enumerators in rural areas were specifically instructed to base the farm-nonfarm classification of a dwelling unit on the respondent's answer to the question, "Is this house on a farm?" Farm residence is therefore determined without regard to the occupation of the members of the household. The classification depends upon the respondent's conception of what is meant by the word "farm," and consequently reflects local usage rather than the uniform application of an objective definition. For this reason, there is considerable variability of response among families living in areas where farm operation is part-time or incidental to other activities.

Dwelling units located on farm land for which cash rent was paid for the house and yard only, and dwelling units on institutional grounds and in summer camps and tourist courts, were

classified as nonfarm, regardless of the answer to the above question.

In rural areas, dwelling units are classified into rural-farm units which comprise all dwelling units on farms, and rural-nonfarm units which are the remaining rural units. In most areas, virtually all farm housing is in rural areas. Therefore, housing characteristics are shown in this report for rural-farm dwelling units instead of for all farm units. Urban-farm dwelling units are dwelling units on farms within the boundaries of urban areas. Such farms constitute only 1.5 percent of the total farm dwelling units in the United States. The number, but not the characteristics, of the urban-farm dwelling units is shown in a few of the tables.

In the 1950 Census of Housing, as in 1940 and earlier, farm housing was defined to include all housing on farms. However, in the 1940 and previous censuses, there was no specific exclusion of dwelling units for which cash rent was paid for the house and yard only, nor of institutions, summer camps, and tourist courts; moreover, the enumerators were not specifically instructed to report farm-nonfarm residence according to the respondent's reply to the question concerning location on a farm. For the United States as a whole, there is evidence from the Bureau of the Census Current Population Survey that the farm population in 1950 would have been somewhat larger and, of course, would have resulted in a larger number of farm dwelling units, had the 1940 procedure been used. However, the change in procedure accounts for only a small part of the indicated decline in the total amount of farm housing over the decade.

In 1950, rural-nonfarm dwelling units include all dwelling units outside urban areas which are not on farms. In 1940 and earlier, units in the suburbs of cities constituted a large proportion of the rural-nonfarm housing. The effect of the new urban-rural definition has been to change the classification of a considerable number of such dwelling units to urban. Rural-nonfarm housing is, therefore, somewhat more homogeneous than under the old definition. It still comprises, however, dwelling units of a variety of types, such as homes in the open country, in villages and hamlets of fewer than 2,500 inhabitants, and in some of the fringe areas surrounding the smaller incorporated places.

In 1950, nonfarm dwelling units for which financial characteristics are presented in this report consist of all units in urban areas and all units not on farms in rural areas.

TYPES OF PLACES

Place.—The term "place" refers to a concentration of population regardless of legally prescribed limits, powers, or functions. Thus, some areas having the legal powers and functions characteristic of incorporated places are not recognized as places.

In a majority of instances, however, the legally prescribed limits of incorporated places serve to define concentrations of population. Of the 18,548 places recognized in the 1950 Census, 17,118 are incorporated as cities, towns, villages, or boroughs. In New England, New York, and Wisconsin, however, towns are minor civil divisions of counties and are not considered as places, even though they may be incorporated. Similarly, in the States in which townships possess powers and functions identical with those of villages, the township is not classified as a place. Although areas of this type are not recognized as places, their densely settled portions may be recognized as unincorporated places or as a part of an urban fringe.

In addition to incorporated places, the 1950 Census recognizes 1,430 unincorporated places. These unincorporated places, which contain heavy concentrations of population, are recognized as places by virtue of their physical resemblance to incorporated places of similar size. To make this recognition possible, the Bureau of the Census has defined boundaries for all unincorporated

rated places of 1,000 inhabitants or more which lie outside the urban fringes of cities of 50,000 inhabitants or more. Because local practice as to incorporation varies considerably from one part of the country to another, some States have very few if any such unincorporated places and others have a great many. Although there are also unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places, and, therefore, they are not separately identified.

Urban places.—Urban places are incorporated places which had 2,500 inhabitants or more and those unincorporated places outside of urban fringes which had 2,500 inhabitants or more on April 1, 1950. In many States, the number of dwelling units in "urban places" is somewhat less than the total urban. The difference comprises dwelling units in those portions of urban fringes that are incorporated places of less than 2,500 inhabitants or are unincorporated.

In the 1940 Census, all incorporated places of 2,500 inhabitants or more and a relatively few areas (usually minor civil divisions) classified as urban under special rules were recognized as urban places.

Places of 1,000 to 2,500 inhabitants.—Places of 1,000 to 2,500 inhabitants comprise incorporated places and those unincorporated places outside urban fringes which had from 1,000 to 2,500 inhabitants on April 1, 1950. In 1940, places of this size for which data were presented were limited to incorporated places.

STANDARD METROPOLITAN AREAS

Origin and purpose.—It has long been recognized that, for many types of social and economic analyses, it is necessary to consider the city and its surrounding area in which the activities form an integrated social and economic system. Prior to the 1950 Census, areas of this type had been defined in somewhat different ways by various agencies. Leading examples were the metropolitan districts of the 1940 Censuses of Housing and Population, the industrial areas of the Census of Manufactures, and the labor market areas of the Bureau of Employment Security. The usefulness of data published for any of these areas was limited by this lack of comparability.

Accordingly, the Bureau of the Census in cooperation with a number of other Federal agencies, under the leadership of the Bureau of the Budget, established the "standard metropolitan area" so that a wide variety of statistical data might be presented on a uniform basis. Since counties instead of minor civil divisions are used as the basic component of standard metropolitan areas except in the New England States, it was felt that many more kinds of statistics could be compiled for them than for metropolitan districts.

Definition.—Except in New England, a standard metropolitan area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more. Counties contiguous to the one containing such a city are included in a standard metropolitan area if according to certain criteria they are essentially metropolitan in character and socially and economically integrated with the central city. Standard metropolitan areas are not confined within State boundaries nor within region or division boundaries. For States having standard metropolitan areas, the constituent counties are found in tables 17 to 21 in the State chapters.

Criteria of metropolitan character relate primarily to the character of the county as a place of work or as a home for concentrations of nonagricultural workers and their dependents. Specifically, these criteria are:

1. The county must (a) contain 10,000 nonagricultural workers, or (b) contain 10 percent of the nonagricultural workers working in the standard metropolitan area, or (c) have at least one-half of its population residing in minor civil divisions with a population density of 150 or more per square mile and contiguous to the central city.

2. Nonagricultural workers must constitute at least two-thirds of the total number of employed persons of the county.

The criteria of integration relate primarily to the extent of economic and social communication between the outlying counties and the central county as indicated by such items as the following:

1. Fifteen percent or more of the workers residing in the contiguous county work in the county containing the largest city in the standard metropolitan area, or

2. Twenty-five percent or more of the persons working in the contiguous county reside in the county containing the largest city in the standard metropolitan area, or

3. The number of telephone calls per month to the county containing the largest city of the standard metropolitan area from the contiguous county is four or more times the number of subscribers in the contiguous county.

Standard metropolitan areas in New England.—In New England, the city and town are administratively more important than the county, and data are compiled locally for such minor civil divisions. Here, towns and cities were the units used in defining standard metropolitan areas, and the criteria relating to metropolitan character set forth above could not be applied. In their place, a population density criterion of 150 persons or more per square mile, or 100 persons or more per square mile where strong integration was evident, has been used. The list of places comprising the standard metropolitan areas for a New England State follows the urbanized area descriptions and maps at the end of the State chapter.

Difference between standard metropolitan areas and metropolitan districts.—Since the metropolitan district (used in the 1940 Census) was built up from densely populated minor civil divisions and since the standard metropolitan area is usually composed of whole counties, the standard metropolitan area ordinarily includes a larger territory than the corresponding metropolitan district. In general, the two types of areas are not strictly comparable. Metropolitan districts were defined almost wholly in terms of density, whereas standard metropolitan areas include whole counties selected on the basis of more complicated criteria, so that population and housing densities in the standard metropolitan areas are considerably lower on the average and show more variation from one area to another.

URBANIZED AREAS

"Urbanized areas" have been defined for the first time in the 1950 Census. These areas were delineated to provide a better separation of urban and rural population and housing in the vicinity of large cities. All of the dwelling units within the urbanized area are classified as part of the urban housing in 1950.

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census between 1940 and 1950. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that comprise its "urban fringe." The boundaries of these fringe areas were established to conform as nearly as possible to the actual boundaries of thickly settled territory, usually characterized by a closely spaced street pattern. Like standard metropolitan areas, urbanized areas are not confined within State boundaries, nor within region or division boundaries. A complete description and a map of each urbanized area of a State is at the end of the State chapter.

The urbanized area can be characterized as the physical city as distinguished from both the legal city and the metropolitan community. In general, the urbanized area represents the thickly settled urban core of the standard metropolitan area. Urbanized areas are smaller than standard metropolitan areas and in most cases are contained in them. Since the boundaries of standard metropolitan areas are determined by county lines and those of urbanized areas by the pattern of urban growth, there are small segments of urbanized areas, in a few instances, which lie outside

the standard metropolitan area. Because of discontinuities in land settlement, there are also some cases in which a single standard metropolitan area contains two urbanized areas. The lists of urbanized areas and of standard metropolitan areas also differ somewhat because the former had to be established for cities of 50,000 or more before 1950, whereas the latter were established for cities of 50,000 or more as determined in the 1950 Census.

DWELLING UNIT

In general, a dwelling unit is a group of rooms or a single room occupied or intended for occupancy as separate living quarters by a family or other group of persons living together or by a person living alone.

Ordinarily, a dwelling unit is a house, an apartment, or a flat. A dwelling unit may be located in a structure devoted to business or other nonresidential use, such as quarters in a warehouse where the watchman lives or a merchant's quarters in back of his shop. Trailers, boats, tents, and railroad cars, when occupied as living quarters, are included in the dwelling unit inventory.

A group of rooms, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or a separate entrance. A single room, occupied or intended for occupancy as separate living quarters, is a dwelling unit if it has separate cooking equipment or if it constitutes the only living quarters in the structure. Each apartment in a regular apartment house is a dwelling unit even though it may not have separate cooking equipment. Apartments in residential hotels are dwelling units if they have separate cooking equipment or consist of two rooms or more.

The basis for the 1950 definition is the concept of "separateness" and "self-containment," and the criteria include qualifications relating both to physical space and its use by the occupants. There is no problem in identifying as a separate dwelling unit a whole house which is occupied by only one family or a person living alone. Objective criteria were developed for identifying separate quarters in structures occupied by more than one family or other group of persons living together; field tests in such structures disclosed that the one characteristic most often associated with separate living arrangements was the presence of "separate cooking equipment." This criterion, therefore, formed the nucleus for the 1950 definition. The criteria "group of rooms with separate entrance" and "each apartment in a regular apartment house" were added to the definition to bring into the dwelling unit inventory other types of living quarters whose occupants maintained separate living arrangements; even though the occupants shared or lacked cooking equipment, it was felt that their quarters were sufficiently separate and self-contained to be considered separate dwelling units. By these criteria, therefore, individual sleeping rooms were not identified as separate dwelling units.

Living quarters of the following types are not included in the dwelling unit inventory: rooming houses with five lodgers or more, transient accommodations (tourist courts, hotels, etc., predominantly for transients), and barracks for workers (railroad, construction, etc.). Living quarters in institutions (for delinquent or dependent children, for handicapped persons, for the aged, for prisoners, etc.), general hospitals, and military installations are likewise excluded from the dwelling unit inventory except for dwelling units in buildings containing only family quarters for staff members. According to the results of the 1950 Census of Population, approximately 5,700,000 people, or 3.8 percent of the total population, lived in rooming houses, institutions, transient accommodations, and other quarters not defined as dwelling units.

The count of dwelling units in the 1950 Census may be considered comparable with the count in the 1940 Census although the dwelling unit definitions differed. The purpose of revising the 1940 definition was to keep the same general concept but make it more objective and thereby yield more uniform results in

a large-scale enumeration. In the 1940 Census, a dwelling unit was defined as the living quarters occupied, or intended for occupancy, by one household. A household consisted of a family or other group of persons living together with common housekeeping arrangements, or a person living entirely alone. The enumerator was not explicitly instructed to define living quarters as dwelling units on the basis of cooking equipment or separate entrance. Further, in 1940, living quarters with five lodgers or more were tabulated as dwelling units, whereas in 1950 such living quarters were not included in the dwelling unit count. Even though some living quarters which were classified as separate dwelling units by one definition would not have been separate dwelling units by the other definition, the over-all effect of the differences is believed to be small for a city, county, or larger area. However, for a city block, tract, or other small area where there are rooming houses, housekeeping rooms, hotels, and similar quarters for which the interpretation of the dwelling unit definition is most likely to vary, it is possible that the count of dwelling units by the two definitions would differ.

OCCUPANCY CHARACTERISTICS

Occupied dwelling units.—A dwelling unit is occupied if a person or group of persons was living in it at the time of enumeration or if the occupants were only temporarily absent, as for example, on vacation. However, a dwelling unit occupied at the time of enumeration by nonresidents is not classified as occupied but as a "nonresident" dwelling unit.

Occupied dwelling units and households.—A household consists of those persons who live in a dwelling unit; by definition, therefore, the count of occupied dwelling units is the same as the count of households. However, there may be small differences between these counts in the Housing and the Population reports because the data were processed independently.

Population in dwelling units.—The count of the population in dwelling units represents the population in living quarters which were classified as dwelling units and therefore excludes the population in institutions and other quasi households. This count was used in computing the 1950 "population per occupied dwelling unit." In 1940, however, population per occupied dwelling unit was obtained by dividing the total population by the number of occupied dwelling units. Thus the 1950 and the 1940 figures for population per occupied dwelling unit are not strictly comparable. The differences are negligible, however, except in those areas where there is an appreciable resident population in institutions, large rooming houses, dormitories, or other quarters not classified as dwelling units.

Tenure.—A dwelling unit is "owner-occupied" if the owner was one of the persons living in the unit even if the dwelling unit was not fully paid for or had a mortgage on it. If the owner of the unit was a member of the household but was temporarily away from home, as in the case of military service or temporary employment away from home, the unit still was classified as "owner-occupied."

All occupied dwelling units that are not "owner-occupied" were classified as "renter-occupied" whether or not any money rent was paid for the living quarters. Rent-free units and units received in payment for services performed are thus included with the renter-occupied units.

Race and color of occupants.—Occupied dwelling units are classified by the race and color of the head of the household according to the definition used in the 1950 Census of Population. The term "color" refers to the division of households into two groups, white and nonwhite. The group designated as "non-white" consists of those whose heads are of Negro, Indian, Japanese, Chinese, or other nonwhite race. A head of a household of Mexican ancestry or birth who is not Indian or of another non-white race was classified as white. The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. The classification "Negro" includes persons of mixed white and Negro parentage, and persons of mixed Indian and Negro parentage unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and nonwhite races are classified according to the race of the nonwhite parent, and persons of mixed nonwhite races are generally classified according to the race of the father.

Spanish-surname households.—In the 1950 Census, for five of the Southwestern States—Arizona, California, Colorado, New Mexico, and Texas—households in which the head was a white person with a Spanish surname were identified separately from other white households.

Number of persons.—All persons enumerated in the population census as members of the household were counted in determining the number of persons who live in the dwelling unit. Lodgers, foster children, wards, and resident employees who share the living quarters of the household head are included in the household in addition to family members.

The median number of persons for occupied dwelling units is the theoretical value which divides the dwelling units equally, one-half having more persons and one-half having fewer persons than the median. In the computation of the median, a continuous distribution was assumed. For example, when the median was in the 3-person group, the lower and upper limits of the group were assumed to be 2.5 and 3.5, respectively. Tenths were used in the computation of the median to permit refined comparisons. The median was computed on the basis of the class intervals shown in the tables for the larger areas.

Persons per room.—The number of persons per room was computed by dividing the number of persons by the number of rooms in the dwelling unit. The ratio was computed separately for each occupied dwelling unit.

Nonresident dwelling units.—A nonresident dwelling unit is a unit which is occupied temporarily by persons who usually live elsewhere. Nonresident units are not included with occupied dwelling units. For the basic occupancy and tenure classification in some of the tables, they are presented as a separate count; otherwise, they are classified with vacant units not for rent or sale. The nonresidents were assigned to the dwelling unit at their usual place of residence.

In 1940, units occupied by nonresidents were tabulated as "vacant, occupied by nonresident" or combined with "vacant, not for rent or sale." The dwelling units maintained by such households at their usual place of residence were tabulated as "vacant, held for absent household," or combined with "vacant, not for rent or sale."

Vacant dwelling units.—A dwelling unit is vacant if no persons were living in it at the time of enumeration, except when its occupants were only temporarily absent. Dilapidated vacant dwelling units were included if they were intended for occupancy as living quarters. New units not yet occupied were enumerated as vacant dwelling units if construction had proceeded to the extent that all the exterior windows and doors were installed and final usable floors were in place; otherwise, potential units under construction were not enumerated.

The enumeration of vacant units in the 1950 Census of Housing is not entirely comparable with the procedure used in the 1940 Census. Counts of total vacant units in 1950 are considered more inclusive than in 1940. In 1940, vacant units were enumerated only if they were habitable; vacant units which were uninhabitable and beyond repair were omitted. In 1950, all vacant units, whether or not dilapidated, were included if they were intended for occupancy as living quarters. Many houses throughout the United States, particularly in rural areas and isolated towns where there was little or no demand for housing, were not enumerated as part of the dwelling unit inventory because they were used for storage or were abandoned and no longer intended for occupancy as living quarters.

Seasonal and nonseasonal vacant units.—Vacant seasonal dwelling units are those intended for occupancy during only a portion of the year, and are found primarily in resort areas. In farm areas, dwelling units used for only a portion of the year to house migratory workers employed during the crop season are classified as seasonal. Similarly, vacant dwelling units in lumber camps were enumerated as seasonal. In resort areas, a dwelling unit which is usually occupied on a year-round basis was considered nonseasonal.

Nonseasonal not dilapidated vacant units, for rent or sale (available vacant units).—This category provides a measure of vacant dwelling units which are on the housing market for year-round use. It excludes dilapidated, seasonal, and other vacant

dwelling units not on the rental or sale market. The count of available vacancies constitutes a more practical measure of the supply of vacant housing than does the count of total vacancies. There was no comparable classification in 1940.

The 1950 category "For rent" consists of vacant units offered for rent as well as those being offered for rent and for sale. The "for sale only" group is limited to those for sale only. "Not for rent or sale" includes units already rented or sold but not yet occupied, and units being held off the market for other reasons.

In the 1940 Census, vacant units for sale and vacant units for rent were enumerated as one combined category, namely, "For sale or rent." This category included all habitable vacant units available for occupancy even though not actually being offered for rent or sale at the time of enumeration, that is, all dwelling units that were vacant except those held for occupancy of an absent household. Thus, the 1940 and 1950 "for rent or sale" counts are not comparable.

STRUCTURAL CHARACTERISTICS

Type of structure.—A structure either stands by itself with open space on all sides or has vertical walls dividing it from all other structures. A "1-dwelling-unit, detached" structure has open space on all four sides and contains only one dwelling unit. A "1-dwelling-unit, attached" structure contains only one dwelling unit, and is one of a row of three or more adjoining structures, or is a structure attached to a nonresidential structure. A semidetached structure is one of two adjoining residential structures, each with open space on the remaining three sides; such a structure containing one or two dwelling units is included in the category "1 and 2 dwelling unit, semidetached." Units were combined in this latter category because there is evidence that some enumerators misunderstood the instructions regarding semidetached structures. Because the category represents a combination of units in structures containing one dwelling unit and those in structures containing two dwelling units, it is not possible to derive a total count of 1-dwelling-unit structures. However, if the number of units in either type of semidetached structure in a community is known to be small, a close approximation of the total number of 1-dwelling-unit structures can be made. A "2-dwelling-unit, other" structure is a detached or attached structure containing two dwelling units. Dwelling units in structures containing three units or more are classified only in terms of the number of dwelling units in the structure.

In apartment developments, each building with open space on all sides is considered a separate structure.

Statistics are based on the number of dwelling units classified by the type of structure in which they are located rather than on the number of residential structures. For some categories, the number of structures can be derived with little difficulty. The number of units equals the number of structures for both categories of "1-dwelling-unit" structures. For the category "2-dwelling-unit, other" structures, the number of structures equals the number of units divided by two. However, the derivation of the exact number of structures in the remaining categories is impossible.

Although there are some differences between the 1950 and 1940 definitions of type of structure, a direct comparison can be made for most of the categories presented. The principal difference involves units in semidetached structures with one or two dwelling units. In 1950, each of two (and only two) adjoining residential structures was classified as "semidetached," regardless of the number of dwelling units in either structure. In 1940, however, units in two adjoining residential structures were classified on the basis of the number of dwelling units in each side. If only one dwelling unit was found in each side, each was classified as "2-family side-by-side." If either side contained more than one dwelling unit, the side containing one dwelling unit was classified as "1-family attached"; if the other side had two dwelling units, it was classified as "2-family other," whereas, if it had more than two dwelling units, it was classified according to the number of dwelling units it contained. The term "family" in the 1940

type-of-structure categories is equivalent to "dwelling unit" in the 1950 categories.

The effect of this different treatment of semidetached structures on the comparability of data between the two censuses is insignificant in any community where either there are a small number of semidetached structures, or where practically all of the semidetached structures contain only one dwelling unit in each adjoining structure.

The only other difference is the treatment of structures with a business unit in the structure. In the 1950 tabulations, structures with business were not distinguished from structures without business. In 1940, such distinction was made for units in structures with one to four dwelling units. The number of structures with business is generally small, so that for most practical purposes this difference does not affect the comparability of the data.

Number of rooms.—All rooms which are used, or are suitable for use, as living quarters were counted in determining the number of rooms in the dwelling unit. Included are kitchens, bedrooms, dining rooms, living rooms, and permanently enclosed sunporches of substantial size; finished basement or attic rooms, recreation rooms, or other rooms used or suitable for use as living quarters; and rooms used for office purposes by a person living in the dwelling unit. A kitchenette or "half-room" which is partitioned off from floor to ceiling was counted as a separate room, but a combined kitchenette and dinette separated only by shelves or cabinets was counted as only one room. Not counted as rooms were bathrooms, strip or pullman kitchens, halls or foyers, alcoves, pantries, laundries, closets or storage space, unused basement or attic rooms not suitable for living quarters, and rooms subleased for office or business purposes by a person or persons not living in the dwelling unit.

The median number of rooms is computed in the same manner as the median number of persons.

Year built.*—The year the structure was built refers to the year in which the original construction was completed, not to the year in which any later remodeling, addition, reconstruction, or conversion may have taken place. "Year built" statistics are based on dwelling units classified by the date of the original construction of the structure in which they are located. The figures do not represent the number of dwelling units added to the inventory during a given period. They represent the number of units constructed during a given period plus the number created by conversions in structures originally built during the same period, minus the number destroyed in structures built during the period. Losses occur through demolition, fire, flood, disaster, and conversion to nonresidential use or to fewer dwelling units.

Data on year built are subject to some inaccuracy because of errors of response and nonreporting. In most cases, the information is based not on records but on the respondent's knowledge of the facts and his ability to remember the year of construction.

Statistics on year built published by the Bureau of the Census differ in several respects from statistics on new construction published by the Bureau of Labor Statistics. In particular, the census data include all types of dwelling units. For example, they include trailers and tourist cabins which were occupied as dwelling units, some seasonal homes, and temporary public housing units; whereas, the Bureau of Labor Statistics data are limited to new permanent dwelling units. Further, the census data reflect units gained or lost since the date of original construction, while the Bureau of Labor Statistics counts only the units in the structure as originally built; thus, a unit built in 1941, for example, and later converted to several units would cause the census count to be higher than the Bureau of Labor Statistics count for units constructed in 1941. Finally, the definition of "nonfarm" as used in the Bureau of Labor Statistics reports is based on the concept

formerly used by the Bureau of the Census and does not correspond to that used in the 1950 Census.

CONDITION AND PLUMBING FACILITIES

Condition and plumbing facilities as a combined item.—Both the structural condition of a dwelling unit and the type of plumbing facilities are considered measures of the quality of housing. These items have been combined into categories representing various levels of housing quality as measured by condition and plumbing facilities. Such comprehensive categories provide a more feasible means of evaluating quality than is possible by the use of the individual items. The statistics on the combination of condition and plumbing facilities are limited to dwelling units for which reports were made on all of these items.

The category "With private toilet and bath" includes those dwelling units with both a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. "With running water, lacking private toilet or bath" includes those dwelling units having running water in the structure, but lacking a private flush toilet or lacking a private bathtub or shower. "No running water" includes units with only piped running water outside the structure or with only other sources of water supply, such as a hand pump.

In table 25 in the State chapters, the category "No private bath or dilapidated" includes, in addition to the category "No running water or dilapidated," all dwelling units that are not dilapidated and have running water, but lack a private flush toilet or private bathing facilities. The one category, therefore, is contained in the other.

In 1940, data for state of repair (condition) and plumbing facilities were presented in combination. Because of differences in the enumeration of condition and water supply, these data are not comparable with the 1950 data.

Condition.—To measure condition, dwelling units were classified as "not dilapidated" or "dilapidated." A dwelling unit was reported as dilapidated when it had serious deficiencies, was run-down or neglected, or was of inadequate original construction, so that it did not provide adequate shelter or protection against the elements or endangered the safety of the occupants. A dwelling unit was reported as dilapidated if, because of either deterioration or inadequate original construction, it was below the generally accepted minimum standard for housing and should be torn down or extensively repaired or rebuilt.

The enumerator determined the condition of the dwelling unit on the basis of his own observation. He was instructed to appraise the condition of units uniformly, regardless of neighborhood or race of occupant. The enumerator was provided with detailed written instructions and with pictures illustrating the concepts "deterioration" and "inadequate original construction." In addition, a film strip accompanied by a recorded narrative was shown the enumerator. Photographs of houses and parts of houses depicted various levels of deterioration or inadequate construction, while the narrative informed the enumerator as to which were to be classified as "dilapidated" or "not dilapidated."

The types of deficiencies used in determining condition relate to weather tightness, extent of disrepair, hazards to safety, and inadequate or makeshift construction. Deficiencies which could be revealed only by an engineering survey, or such deficiencies as inadequate light or ventilation, or the presence of dampness or infestation, were not included among the criteria for determining condition of a dwelling unit.

Specifically, a dwelling unit was to be reported as dilapidated if—

1. It had one or more critical deficiencies, as for example—

a. Holes, open cracks, rotted, loose, or missing materials over a considerable area of the foundation, outside walls, roof, or inside walls, floors, or ceilings.

*Data based on a 20-percent sample. For a description of the sample and estimates of sampling variability, see the section on "Reliability of data."

- b. Substantial sagging of floors, walls, or roof.
- c. Extensive damage by storm, flood, or fire;
or

2. It had a combination of minor deficiencies which were present in sufficient number and extent to give evidence that the unit did not provide adequate shelter or protection against the elements or was physically unsafe. Examples of these deficiencies are—

- a. Holes, open cracks, rotted, loose, or missing materials over a small area.
- b. Shaky or unsafe porch, steps, or railings.
- c. Broken or missing window panes.
- d. Rotted or loose window frames which are no longer rainproof or windproof.
- e. Damaged, unsafe, or makeshift chimney.
- f. Broken, loose, or missing inside stair treads or risers, balusters, or railings.
- g. Deep wear on doorsills, doorframes, outside or inside steps, or floors;
or

3. It was of inadequate original construction. Examples of inadequate original construction are—

- a. Makeshift walls.
- b. Lack of foundation.
- c. Dirt floors.
- d. Inadequately converted cellars, garages, barns, and similar places.

Although the enumerator was provided with detailed oral and written instructions and with visual aids, it was not possible to eliminate completely the element of judgment in the enumeration of this item. There is evidence that some enumerators obtained too large or too small a count of dilapidated units. Consequently, data on condition for small areas, which depend on the work of one or two enumerators, are subject to a wider margin of error than is to be expected for larger areas, where the data represent the returns made by several enumerators.

In the 1940 Census, "dilapidation" was not enumerated; the concept "needing major repairs" was used to provide information about the condition of housing. A dwelling unit was classified as "needing major repairs" when parts of the structure such as floors, roof, plaster, walls, or foundation required major repairs or replacements. A repair was "major" when its continued neglect would have seriously impaired the soundness of the structure and created a safety hazard to the residents. The training program for this item in 1940 did not provide any visual aids or detailed oral and written instructions.

The 1940 Census concept of "major repairs" was replaced by the concept of "dilapidation" for the 1950 Census at the recommendation of a Federal interagency committee on housing adequacy. After a lengthy investigation including field tests of several concepts, the committee reported that "major repairs" was not always a reliable index of housing quality. There was evidence that the enumerator tended to use the cost of the repair in judging between major and minor repairs. Further, "major repairs" measures only the condition of the structure, not the structural level nor the ability of the house to provide adequate shelter. For example, a new house, constructed so that it does not provide adequate protection against the elements, might not technically be in need of "major repairs." Likewise, a unit might have a number of minor deficiencies, none of which technically constitutes a "major repair," but which, when combined, indicate that the unit was inadequate. The committee recommended that the level of quality to be measured, fundamentally, was whether or not the dwelling unit was capable of providing adequate shelter or protection against the elements, and sufficient safeguards for the safety of the occupants. The committee concluded that the term "dilapidated" most accurately described the concept it had recommended for measurement.

No reliable data have been obtained to compare the relationship between the "major repairs" category and the "dilapidated" category. However, it is the opinion of a number of qualified housing economists that if the two definitions were applied in

the same census, the count of "dilapidated" units would be smaller than the count of units "needing major repairs." The two terms differ significantly, and the 1940 and 1950 results on condition are not comparable.

Water supply.—A dwelling unit has "piped running water" if water is piped to it from a pressure or gravity system. "No piped running water" includes water from a hand pump or from a well or stream where no piped running water is available.

A dwelling unit is counted as having hot piped running water whether it is available the year round or only part of the time. For example, hot running water may be available only during the heating season or at various times during the week.

The 1950 data on piped running water were collected in terms of location inside or outside the structure, whereas the 1940 data distinguished between location inside or outside the dwelling unit. However, the 1950 count of units with "piped running water inside structure" may be considered comparable with the 1940 count of units with "running water in dwelling unit" in places where the number of units with running water outside the unit but inside the structure is insignificant.

Toilet facilities.—A dwelling unit is reported as having a flush toilet if the toilet is inside the structure and is operated by means of water piped to it. A flush toilet for exclusive use is differentiated from one that is shared.

Bathing facilities.—A dwelling unit has a bathtub or shower if either type of equipment, supplied with piped running water (not necessarily hot water), is available inside the structure for the use of the occupants of the dwelling unit. An installed bathtub or shower located outside the structure was enumerated as "no bathtub or shower." Bathing facilities inside the structure for exclusive use are differentiated from facilities that are shared.

Exclusive or shared use.—Facilities are for exclusive use when the occupants of only one dwelling unit use them. If there are lodgers in the dwelling unit who also use the facilities, the facilities are still reported as for the exclusive use of occupants of the dwelling unit, provided they are not used by occupants of another dwelling unit. Facilities are shared when occupants of two or more dwelling units use the same facilities. Also, facilities are shared if they would be used by the occupants of a unit now vacant, if that unit were occupied.

Inside or outside structure.—Facilities or equipment are considered "inside structure" if they are located within the dwelling unit or elsewhere in the structure, such as in a common hallway, or in a room used by several dwelling units. Facilities or equipment on an open porch are considered to be outside the structure. Those located in an enclosed porch are considered to be inside the structure, even though it may be necessary to go outside the structure to reach them.

EQUIPMENT AND FUELS*

Electric lighting.—A dwelling unit is reported as "with electric lights" if it is wired for electric lights, even though service may have been temporarily suspended at the time of enumeration.

Heating equipment.—Heating equipment represents the equipment available for heating the dwelling unit during the winter months. A usable heating system or furnace was reported, even though it may have been temporarily out of order or not in operation at the time of enumeration.

Central heating equipment comprises the categories "Piped steam or hot water" and "Warm air furnace." Other means of heating, with or without flue, are considered to be noncentral heating.

The number of units with central heating equipment is considerably larger than the number of central heating installations.

*Data based on a 20-percent sample. For a description of the sample and estimates of sampling variability, see the section on "Reliability of data."

The majority of multi-unit structures have only one central heating system to service all of the units in the structure.

"Piped steam or hot water" includes radiant, panel, and baseboard heating systems, and radiation. "Warm air furnace" includes piped and pipeless warm air furnaces, as well as floor and wall furnaces. "Other means with flue" includes fireplaces and flue-connected heating stoves. A flue is a pipe or enclosed passage, either connected to a chimney or leading directly to the outside of the structure, which carries the smoke or fumes to the outside. All other types of heating equipment, such as electric heaters and portable kerosene heaters, are included in the category "Other means without flue." Stoves and ranges used primarily for cooking were enumerated as heating equipment when they were also the major source of heating.

The 1950 data on heating equipment may be compared with the 1940 data when certain combinations are made. The 1950 category "Warm air furnace" is comparable with the combination of the 1940 groups "Piped warm air system" and "Pipeless warm air furnace." The combination of the 1950 categories "Other means with flue" and "Other means without flue" is roughly comparable with the category "Without central heating" in 1940.

Heating fuel.—Where more than one heating fuel was used in a dwelling unit, the fuel used most for heating was reported. Statistics for heating fuel are presented separately for units with central heating and units with noncentral heating.

The category "Coal" includes coke. "Utility gas" is piped into the dwelling unit from mains from a central system, which is usually owned and operated by a public utility company or by a local government; it may be either manufactured or natural. "Bottled gas," generally known by a trade name, is supplied to the consumer in containers (bottles or tanks) which are replaced or refilled as needed. "Liquid fuel" includes fuel oil, furnace oil, distillate oil, kerosene, coal oil, stove oil, range oil, lamp oil, gasoline, and alcohol.

For the most part, the 1950 data on heating fuel may be compared with the 1940 data when certain combinations are made. The 1950 categories "Utility gas" and "Bottled gas," when combined, are comparable with the 1940 category "Gas." The 1950 category "Liquid fuel" is roughly comparable with the combination of the 1940 categories "Fuel oil" and "Kerosene or gasoline."

Cooking fuel.—The fuel used most for cooking was reported. Where the fuel used most was not readily ascertainable for combination stoves, the fuel reported was the one appearing first in the listing of fuels on the housing enumeration schedule and in the tables. The categories of data on cooking fuel are the same as on heating fuel.

For both cooking fuel and heating fuel, the 1950 Census figures represent the number of households using a particular fuel as the principal fuel for cooking or heating. The data, therefore, are not comparable with reports by utility companies on the number of residential customers for that fuel. Generally, utility company data are based on a count of meters or the number of bills rendered. Several households which are served by one meter are counted as one customer by the utility companies but as several dwelling units by the Bureau of the Census. On the other hand, the utility companies report each customer regardless of the amount of fuel used or its purpose (cooking, heating, or for hot water), while the Bureau reports only the principal fuel used for cooking or heating.

Kitchen sink.—A dwelling unit is reported as "with kitchen sink" if a sink, located within the structure and with a drainpipe leading to the outside, is available for use by the occupants of the unit. The sink need not have running water piped to it.

Usually, the sink is located in the kitchen, but a sink located in a hall, pantry, enclosed porch, or room adjacent to the kitchen, if used in the washing of dishes or cooking utensils, is considered a "kitchen sink." However, a sink located on an open porch, or

a washbowl, basin, or lavatory located in a bathroom or bedroom is not a "kitchen sink."

Refrigeration equipment.—The principal refrigeration equipment available to the dwelling unit was reported, whether or not it was in use at the time of enumeration. "Mechanical" refrigeration includes any type of refrigerator operated by electricity, gas, kerosene, gasoline, or other source of power. "Ice" refrigeration includes a refrigerator, box, or chest cooled by ice supplied from an outside source. "Other" refrigeration includes other devices or methods used to refrigerate food, such as a spring house, cooler, well cooler, an ice house in which storage space is provided for perishable food, and any evaporative cooler which is operated by application of water. A window box, root cellar, open spring, or basement was classified as "none."

Radio.—Data on radio represent the number of dwelling units which have a radio, even though the set was temporarily out of order or being repaired at the time of enumeration. The data do not represent the total number of radios in dwelling units because some dwelling units have two or more sets.

Television.—Data on television represent the number of dwelling units which have a television set, even though the set was temporarily out of order or being repaired at the time of enumeration.

FINANCIAL CHARACTERISTICS

Contract monthly rent.—Contract monthly rent is the rent at the time of enumeration contracted for by the renter, regardless of whether it includes furniture, heating fuel, electricity, cooking fuel, water, or other services sometimes supplied. Monthly rent for vacant dwelling units is the monthly rent asked at the time of enumeration. Data are limited to nonfarm units; data for vacant units are further limited to nonseasonal not dilapidated units, for rent. The rental amount was reported to the nearest dollar.

The contract monthly rent data for renter-occupied nonfarm units are considered comparable for the 1950 and the 1940 Censuses, although in 1950 no dollar estimates were made for rent-free units, whereas in 1940 estimates made for rent-free units were included in the distribution of renter units. The data for vacant units are not comparable, however, because in 1940 rental amounts for all vacant units were presented, whereas in 1950 rent data for vacant units are limited to nonseasonal not dilapidated vacant units, for rent. Furthermore, in 1940 estimates of monthly rent were obtained for owner-occupied and for farm units, whereas in 1950 such data were not collected.

The 1950 rent data indicate rent levels in 1950 and do not reflect changes since 1940 in rents for identical units. In addition to units coming on the market through new construction and conversion, there was a considerable withdrawal of existing rental units through purchase for owner occupancy. Further, there was some shifting of rental units between farm and nonfarm residence. Therefore, the 1950 data apply to a largely different group of rental units.

Changes reflected by the 1940 and 1950 Census data are not comparable with changes in rents obtained by the Bureau of Labor Statistics for its Consumers' Price Index. The data compiled by the Bureau of Labor Statistics represent changes in rent charged for essentially identical units with identical services and facilities.

The median contract monthly rent of the dwelling units is the rent which divides the series into two equal parts, one-half of the units with rents higher than the median and the other half with rents lower than the median. In the computation of the median, the limits of the class intervals were assumed to stand at the midpoint of the 1-dollar interval between the end of one of the rent groups and the beginning of the next. For example, the limits of the interval designated \$10 to \$14 were assumed to be \$9.50 and \$14.50. The median was computed on the basis of the tabulation groups in full detail as shown in the tables for larger

areas. In rare instances where the median is located in the highest tabulation group, \$100 or more or \$75 or more, the median is indicated as \$100+ or \$75+.

The average contract monthly rent instead of the median is presented in the State chapters for places of 1,000 to 2,500 inhabitants. The average is the quotient of the sum of the rents divided by the number of dwelling units reporting rent.

Gross monthly rent.—The computed rental termed "gross rent" eliminates rent differentials which result from varying practices with respect to the inclusion of heat, utilities, and furniture as part of the contract rent. Gross monthly rent is contract monthly rent plus the reported average monthly cost of utilities (water, electricity, gas) and fuels such as wood, coal, and oil, if these items were paid for by the renter in addition to contract monthly rent. If furniture was included in the contract rent, the reported estimated rent of the dwelling unit without furniture was used in the computation rather than the contract rent. Gross monthly rent data were computed for renter-occupied nonfarm units only.

Median gross monthly rent was computed in the same manner as median contract monthly rent. Ordinarily, the median gross rent is higher than the median contract rent. However, the median gross rent may be lower in an area where there are enough cases in which the estimate of the rental value of furniture included in the contract rent exceeds the cost of utilities.

Value of 1-dwelling-unit structures.—Value represents the amount which the owner-occupant estimates that the property, including the structure and its land, would sell for under ordinary conditions and not at forced sale. Value data are limited to nonfarm units in 1-dwelling-unit structures without business and with only one dwelling unit included in the property. Values for other owner-occupied dwelling units are not provided because they would reflect varying amounts for farm land, business uses, or for more than one dwelling unit in the property. For a vacant property, value is the sale price asked by the owner. Data for vacant units are further limited to nonseasonal not dilapidated units, for sale only. Value was tabulated to the nearest hundred dollars.

In 1940, the value data were presented for owner-occupied units in both multi-dwelling-unit structures and 1-dwelling-unit structures. If the owner occupied one of the dwelling units in a structure containing two dwelling units or more, or if a part of the structure was used for business purposes, the value reported in 1940 represented an estimate for that portion occupied by the owner and his household. Thus, the data on value of owner-occupied units

are not strictly comparable for the two censuses because of differences in the types of units for which value was reported. However, 1940 value statistics for 1-family structures without business, which are roughly comparable with the 1950 data, are presented in Volume III of the 1940 Housing reports for the United States, States, and cities of 100,000 inhabitants or more. No value data were provided for vacant dwelling units in 1940.

The median value of the dwelling units is the value which divides the series into two equal parts, one-half of the units with values higher than the median and the other half with values lower than the median. In computing the median, the limits of the class interval were assumed to stand at \$50 below the beginning and end of the value group as shown in the tables. For example, the limits of the interval designated \$2,000 to \$2,999 were assumed to be \$1,950 and \$2,950. The median was computed on the basis of the tabulation groups in full detail as shown in the tables for larger areas. In rare instances where the median is located in the highest tabulation group, \$20,000 or more, \$15,000 or more, or \$10,000 or more, the median is indicated as \$20,000+, \$15,000+, or \$10,000+.

The average value instead of the median is presented in the State chapters for places of 1,000 to 2,500 inhabitants. The average is the quotient of the sum of the values divided by the number of dwelling units reporting value.

Mortgage status.—An owner-occupied dwelling unit was reported as mortgaged if the property on which it was located had an indebtedness in the form of a mortgage or deed of trust, or the occupants had a contract to purchase the property. Statistics on mortgage status are limited to nonfarm owner-occupied dwelling units in structures without business and having from one to four dwelling units.

Data on mortgage status of owner-occupied dwelling units (excluding trailers, tents, boats, and railroad cars) presented in this report differ from data presented in Volume IV, *Residential Financing*, in that statistics in Volume IV relate to all mortgaged residential nonfarm properties instead of to the group described above. Further differences are due, in part, to the fact that the person interviewed for general housing information was not always familiar with the financial arrangements, particularly the existence of a mortgage, nor did the respondent always recognize certain types of financing as mortgages. Data in the report on residential financing, usually collected from owners, are considered more accurate. Some caution, therefore, should be exercised in the use of the mortgage data provided in this report (Volume I).

RELIABILITY OF DATA

CONSISTENCY

The percentages in percentage distributions were computed separately and no adjustment was made to force them to add to exactly 100.0 percent.

Because of the methods by which the statistics were compiled, the figures for parts of an area in a chapter may not total to the figures for the area as a whole. For example, statistics for the counties within a State may not add precisely to the State totals.

Further, there are some differences between the figures in the State chapters, and the figures for the State totals and other areas in tables 17 to 32 of the United States Summary. The State parts of this volume (Parts 2 to 6) were prepared primarily by assembling and binding the statistical portions of previously issued Series H-A bulletins which constituted preprints of the State chapters. Statistics in the United States chapter (Part 1) are summarizations or compilations of data from the individual State chapters. Some errors were discovered after the State bulletins were issued and, generally, the corrected figures were transcribed to the United States Summary.

DATA FOR SMALL AREAS

Users of data for the smaller areas, which are included in the State chapters, should bear in mind that the data for such areas represent the work of a very small number of enumerators (often only one or two). The misinterpretation by an enumerator of the instructions for a particular item may, therefore, have an appreciable effect on the statistics for a small community, even though it would have a negligible effect upon the figures for a large area.

NUMBER REPORTING

Occasionally, the enumerator was unable to obtain all of the information for a dwelling unit, or he failed to record the data. Such instances are generally shown in the tables as "Not reported." However, when farm-nonfarm residence, color of head, occupancy and tenure status, number of persons, or type of structure was not reported for a dwelling unit, the classification was estimated on the basis of related information. Hence, the number reporting for these basic subjects is identical with the total dwelling units.

For sample items, those indicated in the tables by asterisks, the number reporting may be larger than the total number of dwelling units because of the method by which the results were derived from the sample data. (See section on "Sample design.")

Percentages, medians, and averages were based on the number reporting the item rather than on the total.

SAMPLE DESIGN

Some of the subjects in the tables are indicated by asterisks as those for which information was requested for a representative 20-percent sample of dwelling units. The nine subjects obtained on a sample basis were arranged in five groups. These groups were listed in sequence on the housing schedules so that, for each dwelling unit, information was requested for one of these five groups. The sample group appearing first in the sequence was varied to obtain five versions of the schedule. Within each enumeration district, the schedules were divided approximately equally among the five versions.²

This procedure, however, did not automatically insure an exact 20-percent sample of dwelling units for each group of sample questions in each locality. Each enumeration schedule provided for a maximum of 30 persons and 12 dwelling units. Whenever all 30 population lines were completed on a schedule, the instructions called for the next dwelling unit to be enumerated on the following schedule, regardless of whether all housing lines were used. Although the procedure was unbiased, the effect of such blank lines was to introduce variations in the size of the samples, each of which was designed to consist of 20 percent of the dwelling units.

TABLE A.—PROPORTION OF DWELLING UNITS IN SAMPLE FOR SUBJECTS ENUMERATED ON SAMPLE BASIS, FOR REGIONS: 1950

Sample group	United States	North-east	North Central	South	West
	Percent	Percent	Percent	Percent	Percent
Heating equipment and heating fuel.....	20.10	20.13	20.11	20.05	20.10
Electric lighting and refrigeration equipment.....	19.97	19.94	19.98	19.97	19.97
Radio and television.....	19.99	19.98	19.99	20.02	19.98
Kitchen sink and cooking fuel.....	19.96	19.96	19.96	19.97	19.97
Year built.....	19.98	19.98	19.98	19.99	19.97

Estimates of the number of dwelling units with specified characteristics based on sample data were in all cases obtained by multiplying by five the number of dwelling units in the sample with the specified characteristic. Percentages have been obtained in each case by using estimates based on the sample for both the numerator and denominator.

SAMPLING VARIABILITY

The data for items indicated by asterisks are subject to sampling variability. Table B presents the approximate standard errors of sample estimates of selected size. Table C shows the approximate standard errors of percentages computed by using sample data for both numerator and denominator. These tables apply to all areas. For most estimates, linear interpolation will provide reasonably accurate results.³

² In 19 counties of Michigan and Ohio, the sample consisted basically of every fifth dwelling unit, and all the sample questions were asked for each of these units:

Sample estimates may differ, due to sampling variability, from the counts which would be obtained by a complete enumeration. The standard error is a measure of sampling variability. The chances are about 2 out of 3 that the difference between a sample estimate and the complete count is less than the standard error. The amount by which the standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks. For example, the chances are about 19 out of 20 that the difference is less than twice the standard error, and 99 out of 100 that it is less than 2½ times the standard error.

Illustration: Let us assume that in an urban place containing 100,000 dwelling units, there were an estimated 74,000 dwelling units with central heating equipment, 75.3 percent of the 98,300 dwelling units reporting. Linear interpolation between values in table B indicates that the sampling variability for an estimate of 74,000 in an area with 100,000 dwelling units is about 240. Consequently, the chances are about 2 out of 3 that the figure which would have been obtained from a complete count of the number of dwelling units with central heating in this urban place differs by less than 240 from the sample estimate. It also follows that there is only about 1 chance in 100 that a complete count of dwelling units with central heating would differ by as much as 600, i. e., by about 2½ times the number given in the table. Table C shows that the standard error of 75 percent on a base of 100,000 is 0.3 percent; the standard error of the 75.3 percent, by linear interpolation, is also 0.3 percent. Further uses of table C may arise. For example, if 75 percent of the estimated 100,000 units built since 1940 were built since 1945, the standard error is also 0.3 percent. If, in another instance, 75 percent of the estimated 100,000 rural-nonfarm units had mechanical refrigeration, the standard error would be 0.3 percent.

The standard errors shown in tables B and C are not directly applicable to differences between two estimates. These tables are to be applied differently in the three following cases:

1. The difference may be one between a figure based on a sample and a figure obtained from a complete count, for example, a difference arising from a comparison between 1950 sample data and 1940 complete-count data. The standard error of a difference of this type is identical with the variability of the 1950 sample estimate.

2. The difference may be one between two sample estimates, one of which represents the total of a group and the other a part of the same group. For example, the reported number of occupied dwelling units without television in a standard metropolitan area can be obtained by subtracting the estimated number with television in this standard metropolitan area from the sample estimate of the total number reporting. Tables B and C can be used directly for a difference of this type, with the difference considered as a sample estimate.

3. The standard error of any other type of difference between two sample estimates will be approximately the square root of the sum of the squares of each standard error considered separately. This formula will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, although it is only a rough approximation if the difference is between two characteristics in the same area.

³ A closer approximation of a standard error from table B may be obtained by using $1.8z\sqrt{\frac{1}{z} - \frac{0.9}{D}}$ where z is the size of the estimate and D is the total number of dwelling

units in the area; in table C, the approximation is $1.8\sqrt{\frac{p(1-p)}{y}}$ where p is the estimated percentage and y is the size of the base. For example, the approximation provided by the above formula of the standard error of an estimate of 100,000 dwelling units (z) in an area with 150,000 dwelling units (D) is 360; linear interpolation would yield about 190.

TABLE B.—STANDARD ERROR OF ESTIMATED NUMBER: 1950
[Range of 2 chances out of 3]

Estimated number	Dwelling units in area ¹							
	1,000	10,000	25,000	100,000	1,000,000	5,000,000	25,000,000	45,000,000

¹ An area is the smallest complete geographic unit to which the estimate under consideration pertains. Thus, the area may be: the United States, region, division, State, city, county, standard metropolitan area, urbanized area, or their urban or rural portions. The rural-nonfarm or rural-farm dwelling units in the United States, State, or county, the nonwhite-occupied dwelling units, the owner-occupied dwelling units, etc., do not represent complete areas.

COMPLETENESS OF ENUMERATION

Control and measurement of quality of enumeration.—The degree of completeness of enumeration has always been a matter of deep concern to the Bureau of the Census. This concern with the quality of its products has led the Bureau of the Census to undertake two kinds of activity: (1) Development of procedures to improve the quality of enumeration and (2) systematic evaluations of the quality of enumeration, particularly of the degree of completeness actually attained in its censuses.

In the 1950 Censuses of Population, Housing, and Agriculture, a number of devices were developed to improve the quality of enumeration. Also, a major attempt was made to measure the degree of completeness of the enumeration by means of a carefully conducted post-enumeration survey. This took the form of a re-enumeration in a scientifically selected sample of areas in the United States, thus permitting a direct check on a case-by-case basis of the actual enumeration. The results of this survey for the Census of Housing indicated a net underenumeration in the census count of occupied dwelling units in the United States of about one million, or 2.5 percent.

It may safely be said that no national census, whether in the United States or abroad, has ever represented an absolutely accurate count. Accuracy in a census can be increased by using better procedures, but some procedures are so expensive that the improvement would not be worth the added costs.

Procedures to improve quality of enumeration.—In this country, the difficulties of finding and identifying many classes of dwelling units, the living habits of apartment dwellers and lodgers in our metropolitan centers, and the inexperience of most of the

census enumerators, all represent relatively great problems. Thus, the difficulties involved in obtaining a complete and unduplicated count of the number of dwelling units in the United States, in addition to obtaining accurate information concerning the characteristics of dwelling units, are clearly very great. The major devices used in the 1950 Census of Housing to improve quality were:

1. The enumerators were given a course of training that emphasized the importance of an accurate count, the definition and identification of dwelling units, and the classification of dwelling units with respect to such complicated characteristics as the condition of the dwelling unit. A training guide for the instructors, film strips, records, and practice enumerations were among the devices used.

2. Each enumerator was furnished with a map of his enumeration district; the map showed the boundaries of the area for which he was responsible.

3. A crew leader was assigned to supervise each group of approximately 15 enumerators. The crew leader's duties included helping enumerators with problem cases and spot-checking a sample of the dwelling units assigned to them.

4. District supervisors made preliminary announcements of the number of people counted so that any complaints or criticisms concerning the completeness of the enumeration in local areas could be made before field offices were closed. This led not only to enumerating people who might otherwise have been missed, but also to increasing the coverage of dwelling units.

Post-Enumeration Survey.—A particularly important and useful method of checking the accuracy of enumeration is a direct check on a case-by-case basis of the actual enumeration. A procedure of this type was used in the Post-Enumeration Survey of the 1950 Census in which a re-enumeration on a sample basis was undertaken. To check for dwelling units erroneously omitted from the census, a probability sample of about 3,500 small areas was canvassed and the relistings compared with the original census listings. In addition to the sample directed towards discovering erroneously omitted dwelling units, a sample of about 22,000 enumerated dwelling units was investigated to determine whether or not they were erroneously enumerated. This sample of enumerated dwelling units was also used to determine the accuracy of the reports obtained on their characteristics, such as number of rooms, rent, value, and the presence or absence of piped hot water.

The Post-Enumeration Survey interviewers were carefully selected and were given intensive training and supervision. Great efforts were made to obtain information from respondents who were presumably best informed regarding the information desired—in the case of occupied dwelling units, usually the head of the household or the spouse of the head. These measures resulted in an expenditure per case in the Post-Enumeration Survey many times that which was feasible for the original census enumeration.

A further description of the procedures and results of this Post-Enumeration Survey will be published at a later date. The discussion below is limited to an analysis of the completeness of enumeration of *occupied* dwelling units.

As indicated in table D, the net underenumeration in the census count of occupied dwelling units in the United States is estimated at 2.5 percent (with an estimated standard error of 0.2 percent). The estimated underenumeration is the difference between the estimated erroneous omissions and the estimated erroneous inclusions. The figures shown in table D report those errors in the count which were detected by the Post-Enumeration Survey. Errors not reflected in these figures may have arisen because of the following factors among others:

1. Identifying all errors in the coverage of the census is extremely difficult. Although some of the errors in the census listings come from carelessness or ineptness of the enumerators, many of them are a result of the intrinsic difficulty of recognizing certain types of dwelling units—for example, dwelling units in "converted" buildings, dwelling units in basements or behind

stores. The Post-Enumeration Survey interviewers did succeed in locating many of the dwelling units which were missed or erroneously included in the census, but they could not identify all such cases. A small-scale field check on the Post-Enumeration Survey results indicated that the Post-Enumeration Survey errors were, in general, in the direction of underestimating the number of erroneously omitted dwelling units.

2. The reliability of the Post-Enumeration Survey estimates, as in all statistical surveys, is also affected by errors in the application of sampling and other procedures.

Those errors in the Post-Enumeration Survey which could be identified were almost always in the direction of underestimating the number of occupied dwelling units erroneously omitted from, or erroneously included in, the census, with probably more erroneous omissions than inclusions. These and other considerations suggest that the estimated net underenumeration of 2.5 percent in 1950 is a minimum estimate.

As indicated in table D, there appears to be some variation in the coverage error of the housing census among tenure classes, with renter-occupied units showing higher levels of error than owner-occupied units. The differences that appear must be interpreted, however, in the light of the sampling variability shown in table E. The error rates would also vary among smaller areas such as individual States, counties, and cities; but the sample was not large enough to yield reliable estimates for such areas.

It should be noted that not all of the persons residing in erroneously omitted occupied dwelling units were missed in the census. This is a consequence, in part, of some erroneous omissions of dwelling units arising from failure to apply the dwelling unit definition correctly; in particular, the reporting in the census as one dwelling unit, living quarters which should have been re-

ported as two or more dwelling units. In such situations, all of the persons may have been correctly counted in the 1950 Census of Population. For this reason, the computation of ratios representing the number of missed persons per erroneously omitted dwelling unit cannot be made by relating the findings on erroneously omitted persons presented in Population Volumes I and II to those for erroneously omitted dwelling units in Housing Volume I.

The definitions which were used for erroneous omissions and erroneous inclusions of occupied dwelling units are important in interpreting the results:

1. *Erroneous omissions.*—An occupied dwelling unit was classified as erroneously omitted—

If it was not enumerated at all or was not enumerated in its proper enumeration district;

If it was enumerated as vacant when it should have been enumerated as occupied; or

If it was enumerated as part of another dwelling unit when it should have been enumerated as a separate dwelling unit.

2. *Erroneous inclusions.*—An occupied dwelling unit was classified as an erroneous inclusion—

If it was enumerated more than once or was enumerated in the wrong enumeration district;

If it was enumerated as occupied when it should have been enumerated as vacant;

If it was enumerated as a dwelling unit when it should have been enumerated as part of a dwelling unit;

If it was non-existent (i. e., an apparent fabrication on the part of the original enumerator); or

If it did not meet the criteria for definition as a dwelling unit.

Some limitations of the Post-Enumeration Survey results have been discussed above. An additional limitation is, of course, the presence of sampling variability. Estimates of standard errors are presented in table E.

TABLE D.—ESTIMATES OF COVERAGE ERROR FOR OCCUPIED DWELLING UNITS, BY TENURE AND BY REGIONS: 1950

[Numbers are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded. Percentages are based on census count]

SUMMARY OF FINDINGS

The 1950 Census of Housing marks the second decennial census of housing in the United States. Although the first such census was not taken until 1940, information on a few housing items was collected in earlier years in conjunction with the decennial censuses of population and agriculture. Information on housing for these earlier years was limited, for the most part, to counts of occupied dwelling units by tenure, color of occupants, and residence, and to data on homes which were mortgaged. In recent years, particularly since the period of considerable housing activity in the 1920's and the depression of the early 1930's, there has been a growing need for data not only on increments from time to time but also on the quality, characteristics, and utilization of the housing inventory. Such data were provided by the 1940 and 1950 Censuses of Housing.

The 1950 Census, in addition, reveals significant facts on changes that have occurred during a period of war and postwar conditions. Changes resulted from many factors. For example, extensive in-migration to some areas created severe housing shortages, increased doubling-up, and stimulated new construction. In other areas, out-migration created an oversupply and dwelling units were lost from the inventory through obsolescence or abandonment.

In general, housing improved during the decade. More homes were equipped with essential plumbing facilities and household conveniences in 1950. Improvements were greater in farm housing than in nonfarm housing. The extension of electricity to rural areas has contributed much toward making possible the installation of such facilities as running water and modern plumbing, and the addition of electrical household equipment.

Dwelling units added to the inventory since 1940 tended to be of moderate size—4 or 5 rooms. By 1950, there were fewer of the smallest and of the largest units. At the same time, households declined in average size, continuing a trend observed for many decades. The number of small households was augmented by the increasing number of individuals living alone and the tendency of older couples to maintain separate households. Even with this "spreading out" of the population, there was no significant net change in the number of married couples who were sharing the living quarters of others.

The price of housing rose substantially during the forties—more so in value than in rent. Nevertheless, more people owned their homes in 1950 than at any census date for which information on tenure was collected. Moreover, in 1950, there were more non-farm home owners who held their properties free of mortgage.

Results of the 1950 Census indicate that, on the whole, people were better housed than they were 10 years earlier. However, in spite of improvements, there still was a substantial number of families who were poorly housed.

HOUSING INVENTORY

Change in inventory.—The United States had 45,983,000 dwelling units in 1950—a net gain since 1940 of 8,658,000. This is the greatest numerical growth between successive censuses. For the twentieth century, the relative growth of 23 percent in occupied dwelling units between 1940 and 1950 was exceeded by the 27-percent increase between 1900 and 1910 during the peak of the European immigration. The relative growth was even greater during the nineteenth century when it averaged about 35 percent per decade.¹

The change in inventory represents the sum of new construction and conversions, minus the losses due to demolition, obsolescence, and the like. In all decades, new construction was by far the most important factor in the change in the inventory. During the forties, the war held down new construction for several years so that conversions played an important part in creating an additional supply of housing units. Many large homes were converted into multi-family structures.

The rate of new construction was high in the early part of the decade (1940 and 1941) and again after the war. The demand for housing resulted in a building boom which was sustained through 1950.

One of the most important factors affecting the housing market was the great amount of migration, principally from rural areas to

¹ Prior to 1940, statistics were collected on "families" which by definition corresponds to the current term "households." The relative increase in households can be assumed to approximate the increase in total dwelling units since the number of vacancies is not a significant part of the total inventory.

Table F.—DWELLING UNITS FOR GEOGRAPHIC DIVISIONS: 1950 AND 1940

Figure 3.—PERCENT INCREASE IN DWELLING UNITS, 1940 TO 1950, BY STATES

urban centers. This left many dwelling units vacant in rural areas and created a serious shortage in many metropolitan areas. In many sections of the country, migration played an important part also in the loss of dwelling units from the inventory. The volume of demolition and abandonment probably was greater during this period than in any other period of our history.

This past decade surpassed all previous decades in its level of activity in the residential housing market. The accumulative effect of the depression of the thirties with a low rate of housing production, the dislocation of families due to World War II activities, and the improved economic status of families contributed to a tremendous demand for housing.

Another important development during the forties was the increased number of seasonal dwelling units. The million dwelling units reported as seasonal and vacant in the 1950 Census reflects more than 50-percent increase in the number of such units since 1940.

The estimated number of residential structures increased at the same rate as dwelling units during the 10-year period. The large number of conversions which took place during this period had little effect on the number of structures. Evidently, the volume of conversions to multi-unit structures was offset by the increased construction of new single-family homes.

Urban-rural and farm-nonfarm residence.—In 1950, the great majority of dwelling units were in cities and suburban areas, with only a relatively small portion on farms; 64 percent were urban, 22 percent rural-nonfarm, and 14 percent rural-farm.

Because of revisions in the definitions of urban and farm residence between the two censuses, the figures for 1940 and 1950 are not strictly comparable. The revision of the urban definition resulted in a shift of approximately 7,500,000 persons from rural to urban, or about one-third of the total increase in the urban population since 1940. No corresponding figures are available for dwelling units, but it can be assumed that the definitional change accounted also for about one-third of the increase in urban dwelling units since 1940.

It is impossible to determine the exact effect of the change in the definition of farm housing, but it is estimated that the change in procedure represented only a small part of the indicated loss in the number of farm dwelling units. Aside from the change due to definition, the loss in farm dwelling units came from two principal sources: the migration of households from farms to urban centers, and the shifting of dwelling units from farm to nonfarm status because the occupants no longer carried on farming operations. Many farm dwelling units were left vacant and eventually abandoned as residences after the families moved. The gross loss from the 7.6 million which were classified as farm dwelling units in 1940 is even greater than indicated by the census data, consider-

TABLE G.—DWELLING UNITS INSIDE AND OUTSIDE STANDARD METROPOLITAN AREAS: 1950 AND 1940

Location	1950		1940 ¹		Increase, 1940 to 1950	
	Number	Per cent	Number	Per cent	Number	Per cent
All dwelling units.....	45,983,398	100.0	37,325,470	100.0	8,657,928	23.2
In standard metropolitan areas.....	25,626,381	55.7	19,978,157	53.5	5,648,224	28.3
In central cities ²	15,119,997	32.9	12,703,111	34.0	2,416,886	19.0
Outside central cities.....	10,506,384	22.8	7,275,046	19.5	3,231,338	44.4
Outside standard metropolitan areas.....	20,357,017	44.3	17,347,313	46.5	3,009,704	17.3

¹ Data are for the central cities and the counties (cities, towns) comprising the standard metropolitan areas as defined for the 1950 Census.

² The largest city in a standard metropolitan area is the principal central city. Any other city of 25,000 inhabitants or more within a standard metropolitan area having a population amounting to one-third or more of the population of the principal city is also a central city. However, no more than 3 cities have been defined as central cities of any standard metropolitan area.

ing that almost one million new units were built on farms during the forties.

Geographic areas.—By geographic division, the largest proportions of dwelling units were located in the populous States of the Middle Atlantic and East North Central Divisions, each division having about one-fifth of the United States total. The smallest concentration was in the Mountain Division which, with about one-third of the land area, had only three percent of the dwelling units in the United States. There were substantial differences among the divisions in the rate of increase in the number of dwelling units since 1940, indicating that the rate of household formation was lower in some divisions than in others and that there was significant migration from one section of the country to another. The farm belt States of the West North Central Division had the smallest increase since 1940, 13 percent. The Pacific Division, on the other hand, with its increase of 49 percent, reflects a big building program during the decade to take care of the substantial migration into the area.

Standard metropolitan areas.—The distribution of housing inside and outside metropolitan areas demonstrates the continued long-term trend of families to move out of isolated areas to more concentrated areas in and around large cities. In 1950, more than half the dwelling units were located in standard metropolitan areas. Since 1940, dwelling units in the counties comprising these areas increased 28 percent, compared with the increase of only 17 percent outside the areas. Within the metropolitan areas, dwelling units in the central cities increased 19 percent, compared with the growth of 44 percent outside these cities.

OCCUPANCY AND STRUCTURAL CHARACTERISTICS

Vacant dwelling units.—In 1950, there were more than three million vacant dwelling units in the United States. The resulting "gross" vacancy rate of 6.6 percent was high, considering the tight housing situation in many areas. The "available" vacancy rate, which more closely reflects the true market situation for residential housing, was relatively small, 1.6 percent of the total dwelling units. Available vacancies include only nonseasonal, not dilapidated vacant dwelling units which are being offered for rent or sale. The difference between these two rates represents units which were not considered part of the available supply because they were already rented or sold or were being held off the market by the owner, or they were for seasonal use or dilapidated.

In general, about the same relative total supply of vacancies existed in both 1940 and 1950. A comparison of "available" vacant units cannot be made, however, since data for this category are not available for 1940.

¹ An available vacant unit is a nonseasonal, not dilapidated vacant dwelling unit which is being offered for rent or sale.

FIGURE 4.—OCCUPIED DWELLING UNITS AND POPULATION: 1890 TO 1950

Many of the vacancies in 1950 were for seasonal occupancy or were in the "wrong" places for most families looking for houses for year-round use; 35 percent of the vacancies were for seasonal use and 37 percent were nonseasonal vacancies in rural areas. The great migration of families from the farms and small towns to the large centers of population during World War II resulted in an oversupply of houses in some areas, but a serious shortage in many others. Many of the large urban centers had critical housing shortages in 1950; approximately two-fifths of the standard metropolitan areas had available vacancy rates of 1.0 percent or less.

Occupied dwelling units and population.—The increase since 1940 of 23 percent in occupied dwelling units and 14 percent in total population is very similar to the average increase per decade since 1890, which was 22 percent for occupied dwelling units and 16 percent for population. During each decade, the number of households has increased at a much more rapid rate than population. The interrelationship of household and population trends is especially significant to the housing market because the trend in households is one of the most important factors in the demand for new dwelling units. The difference in growth of occupied dwelling units and population reflects the decline in household size. Since 1890, the average size of household has decreased from 5.0 persons to 3.5 persons.

The decline in the average size of household in the last 60 years is attributable mainly to the decline in the birth rate. Further, the number of smaller households has been augmented by the changes in the pattern of family living and the longer life span. Usually the household of the past contained not only the head, wife, and children, but often older relatives of the family and sometimes servants. This pattern has changed, with proportionately fewer households including relatives and servants. The long-term trend is one of "spreading out," with each adult group having its own household. Of particular importance is the increasing number of older people. The growing tendency of these people to maintain separate households has been an important factor in contributing to an increasingly larger number of small households.

The decrease in household size has been about the same for non-farm and farm units since 1920. In the last 30 years, the average size of nonfarm households decreased from 4.2 to 3.4 persons, compared with a drop from 4.7 to 4.0 for farm households.

¹ The term "occupied dwelling units" for 1950 and 1940 is not exactly the same as the term "families" for earlier years, but the differences are so small as to be negligible. The count of families for 1930 and 1900 represents private families only; that for 1920, 1910, and 1890 includes the small number of quasi-family groups which were counted as families in those years.

² The population per occupied dwelling unit (or family) is the total population (including population in quasi households) divided by the number of occupied dwelling units (or families). For 1920, 1910, and 1890, the count of total families was used in the computation; for the other years, the count of occupied dwelling units or private families was used. Because the population in private families was not tabulated separately for all years, total population was used in computing each of the averages to provide consistency between the statistics for the various censuses.

³ Not available.

⁴ For 1930 to 1950, the category "Farm" consists of rural-farm units only; for 1890 to 1920, "Farm" contains a small proportion of urban-farm families in addition to the rural-farm families. For changes in the definition of "farm," see "Farm and nonfarm residence," page xiv.

From 1940 to 1950, there was a sharp decline in both the farm population and in the number of households on farms. Primarily the decline reflects the heavy movement of the population from farms to cities, particularly during World War II.

Race of occupants.—About 1 out of 11 occupied dwelling units in the United States in 1950 was occupied by a nonwhite household. A great majority of these were Negro; the remainder were of Indian, Japanese, Chinese, or other race.

Since 1890, the number of nonwhite households increased at a slower rate than white households, dropping from 11.3 percent of all households in 1890 to 8.8 percent by 1950. The average increase per decade in the number of nonwhite households was 18 percent compared with 23 percent for white households. These averages are consistent with the general pattern of population growth for the respective racial groups during this period; on the average, the nonwhite population increased 12 percent per decade and the white population increased 16 percent.

However, there were considerable variations in the rates of growth between the white and nonwhite population during the 60-year period. Prior to 1920, the white population grew much faster than the nonwhite population. The differential increase was largely due to the greater migration of white persons into the United States and to the higher death rate among nonwhites. During the 1920's and 1930's, the white and nonwhite population increased at about the same rate. In the 1940's, however, the percentage increase among nonwhites surpassed that of the white population—17 percent and 14 percent, respectively.

Although the nonwhite population increased about the same or faster than the white population in recent decades, the rate of increase in the number of dwelling units the nonwhites occupied lagged far behind the rate of increase for white households. From 1940 to 1950, the growth in the number of households was 15 percent for nonwhite compared with 24 percent for white. "Spreading-out" occurred to a greater extent among whites than among nonwhites. The white population per occupied dwelling unit decreased from 3.7 in 1940 to 3.5 in 1950, whereas the nonwhite average remained about the same, 4.1 in 1940 and 4.2 in 1950.

TABLE K.—RACE OF OCCUPANTS: 1890 TO 1950

¹ See footnote 1, table J.

² Not available.

Home ownership.—One of the most significant developments since 1940 is the substantial increase in home ownership. In 1950, there were 8,360,000 more home owners than in 1940—a gain of 55 percent. The gain represents the largest numerical and proportionate increase during any decade since information on tenure was collected by the Bureau of the Census. Second to this gain was the 29-percent increase in home ownership from 1920 to 1930.

The gain from 1940 to 1950 resulted from new construction and the sale of existing rental homes for owner occupancy. The shift to owner occupancy was so great that there was a net decrease of approximately 400,000 in the number of renter-occupied units. The large number of units in rental projects constructed during the late forties and the conversions which produced large numbers of rental units during the war years did not nearly equal the unprecedented number of units which shifted from renter to owner occupancy.

The 1950 Census does not provide figures on the number of units which shifted between renter and owner occupancy during the decade. It is estimated, however, from the data on tenure and year built, that at least 3,000,000 owner-occupied units in 1950 were renter occupied in 1940. A large part of the shift from renters to owners occurred in the 1-dwelling-unit detached structures. In an increasing market of home owners, this segment of rental housing was the most likely to change in tenure.

The home ownership rate declined slowly from 1890 to 1920; then increased in the twenties back up to the 1890 level, but dropped during the depression of the thirties. The lowest level during the 60-year period was in 1940, and the highest level was in 1950. The high point in 1950 reflects favorable economic conditions, easier financing, and the effect of rent control. The

FIGURE 5.—TENURE, NONFARM AND FARM: 1890 TO 1950

1940 rate reflects the less favorable economic conditions during the previous 10 years.

The trend in owner occupancy for nonfarm housing is quite different from the trend for farm housing. The nonfarm rate was 37 percent in 1890 and in 1900; it increased during every decade until it reached 46 percent in 1930, then dropped to 41 percent by 1940. On the other hand, the farm rate has consistently dropped every decade except the last—from a high point of 66 percent in 1890 to a low of 53 percent in 1940. Both the farm and nonfarm rates increased substantially during the forties. The farm rate came back to the 1890 rate; during the forties, there was a significant loss of renter units from the farm inventory, with little loss in the number of owners.

The proportion of home owners among nonwhites in 1950, and in every other decade since 1890, was far below the proportion for whites. However, in the last 10 years, nonwhite owners increased at a more rapid rate than white owners, reflecting in part the improved economic status of the nonwhites.

Rooms and persons.—During the last 10 years, the tendency in the housing market has been towards the creation of units of moderate size, particularly 4- and 5-room units. Compared with the 23-percent gain in all dwelling units, 4- and 5-room units increased by 36 percent from 1940 to 1950. At the same time, there was a small loss in the smallest units (1 room) and the largest units (8 rooms or more). Rural-farm units were the largest in size with a median of 5.1 rooms, compared with 4.6 for urban and 4.5 for rural-nonfarm units.

Households were smaller than in 1940, continuing the long-term trend apparent ever since the Bureau of the Census first collected such statistics. There was a substantial increase in the number of the very small households and a decrease in the number of larger households. In comparison with the over-all increase of 23 percent in all households, 1-person households increased 49 percent and 2-person households increased 39 percent. On the other hand, 7-or-more-person households decreased 20 percent since 1940.

FIGURE 6.—NUMBER OF ROOMS: 1940 AND 1950

The most common size was the 2-person household which represented 28 percent of the total. This size was the most common in 1940 also, when it represented 25 percent of all households.

The persons-per-room data indicate that the expansion of the housing inventory, concomitant with the reduced size of household, has resulted in less crowding. The proportion of occupied dwelling units having more than 1 person per room dropped from 20 percent in 1940 to 16 percent in 1950. The proportion was highest for rural-farm units of which 22 percent had more than 1 person per room in 1950. At the other end of the scale, there were approximately one-third more dwelling units with three-fourths or less persons per room, also implying less crowding since 1940.

The persons-per-room ratio is often used as a measure of "crowding" or intensity of use of occupied dwelling units. However, it does not take into account all the components of the measure; for example, it does not reflect adequacy of floor space and room arrangement necessary for comfortable living. Further, it does not take into account such factors as variation in the size of rooms or varying requirements of families because of the composition by sex and age groups. Also, it does not measure the intensity of use of a structure which may contain several dwelling units.

Data on "crowding" are consistent with other statistics showing the faster growth of households than population. To a great extent, this faster growth reflects the large volume of marriages during the decade. At the same time, there has been little net change in "doubling up" since 1940. According to results of the 1950 Census of Population, the number of married couples sharing the homes of others amounted to 2.3 million or 6.6 percent of the total married couples, compared with 1.9 million or 6.8 percent in 1940. However, the doubling rate fluctuated considerably during the period. According to the Current Population Surveys (sample surveys made by the Bureau of the Census), doubling reached its peak in 1947, when it was close to 9 percent, then declined steadily.

FIGURE 7.—SIZE OF HOUSEHOLD: 1940 AND 1950

Age of structure.—For several years prior to the 1950 Census, the Nation had one of the greatest building booms in its history. By April 1950, approximately 1 out of 5 dwelling units were in structures built in the last 10 years. Proportionately more of the rural-nonfarm units were new as compared with the urban and rural-farm groups. The rural-farm group had the largest proportion of old units, those in structures which were over 30 years old.

Compared with the housing inventory in 1940, the 1950 inventory contained more new units and, at the same time, more old units. In 1950, 21 percent of the units were less than 10 years old and 46 percent were more than 30 years old, compared with 16 percent and 41 percent, respectively, in 1940.

The 1950 Census reported nearly the same number of units in structures built before 1920 as were reported in the 1940 Census. The demand for housing during the forties was such that conversions practically offset losses among the old structures. In structures built between 1920 and 1929, there was a small increase of units, indicating that the gains through conversion more than made up for the losses in this year-built group.

Although the 1950 Census reported 9.2 million units in structures built during the preceding 10 years, the net increase in the dwelling unit inventory since 1940 amounted to 8.7 million units. The 500,000 difference between the 9.2 and the 8.7 million represents the net loss of units in structures built prior to 1940; that is, among the older structures, there were at least 500,000 more units lost to the supply than were gained through conversions. (The 500,000 does not take into account units for which year built was not reported. If the "not reported" group were distributed proportionately, the figure would show a net loss of at least 900,000 units.)

Of the 9.2 million units built since 1940, 5.9 million were built in 1945 or later. The volume of building for this period, January 1945 to April 1950, averaged approximately 1.1 million units per year. Nonfarm units accounted for 90 percent of the new units, averaging about 1 million units annually for the five years.

Type of structure.—Despite the fact that many dwelling units were added to the housing inventory and some were withdrawn during the decade, the relative proportions of dwelling units in the various types of structure remained practically unchanged from the 1940 pattern. In 1950, as in 1940, 1-dwelling-unit detached houses were the most common type. Approximately 2 out of 3 dwelling units in the United States were in 1-dwelling-unit detached structures. The ratio varied from 1 out of 2 urban dwelling units to almost all the farm units. Of the four regions, the Northeast had by far the lowest proportion of units of this type.

30 years 4 months or more.....	45.8	46.4	39.0	53.4	40.9

It is not possible to obtain a precise measure of units in all 1-dwelling-unit structures, because semidetached structures containing 1 dwelling unit were combined with those containing 2 units.² Of all units, 64 percent were in 1-dwelling-unit detached structures and 3 percent were in 1-dwelling-unit attached structures. Only 3 percent were in semidetached structures containing 1 or 2 units. The proportion of units in all 1-dwelling-unit structures, therefore, is between 67 and 70 percent.

Although the over-all pattern was the same as in 1940, there were significant changes in the tenure groups by type of structure. Owner-occupied units in 1-dwelling-unit detached structures increased 55 percent since 1940; in 1950, owner units represented 73 percent of all occupied units in such structures, whereas in 1940 they represented 57 percent.

During the decade, renters in 1-dwelling-unit detached structures showed a 23-percent decrease. On the other hand, there has been a significant increase in the rental units in multi-unit structures, particularly those with 5 to 19 dwelling units which increased 39 percent. This increase reflects the expansion of the number of moderate-sized structures in the rental market, most of which were in large garden-type developments.

QUALITY OF HOUSING

Bathing and toilet facilities, water supply, kitchen sink.—As measured by plumbing facilities, there were significant improvements in the quality of housing from 1940 to 1950. The proportion of dwelling units with private flush toilet inside the structure increased from 60 percent in 1940 to 71 percent in 1950, representing an increase of over 10 million units. Units with private bathtub or shower rose from 56 percent to 69 percent, also amounting to over 10 million units. Nevertheless, in 1950, there were still almost 13 million units lacking private flush toilet and nearly 14 million units lacking private bathtub or shower; each of these figures is about 2 million smaller than the corresponding 1940 count.

Improvements since 1940 were greater for rural-farm units than for either rural-nonfarm or urban dwelling units, partly facilitated by the increased availability of electric power for pumping water into farm dwellings.

As with other facilities, there were marked differences between urban and rural-farm units in the proportion having running water and the proportion equipped with a kitchen sink. While almost all urban units had running water and a kitchen sink, less than half (43 percent) of the rural-farm units had inside piped running water and little more than half (55 percent) had a sink. For farm housing, kitchen sink and inside piped running water are

² See p. xvii for further explanation.

important measures of quality. A substantial number of farm units, 14 percent, had a kitchen sink although they did not have piped running water; many of these had hand pumps inside the house. Approximately 42 percent of the farm units had neither facility.

Condition and plumbing facilities.—The quality of housing is best revealed by its physical characteristics such as structural condition and plumbing facilities. While such factors as design, light, ventilation, and type of neighborhood also reflect the quality of dwelling units, it is not feasible to measure them in a large-scale census enumeration. However, these elements are usually closely associated with condition and plumbing facilities.

Data on condition are combined with data on plumbing facilities in order to provide a more comprehensive measurement of quality than is possible by the use of the plumbing items alone. In rural areas, such a large proportion of dwellings lack plumbing facilities that it is not practical to use them as the sole indicator of housing quality. In urban areas, while plumbing facilities are an important element in the determination of housing quality, the mere presence of facilities does not preclude the possibility of serious housing deficiencies on other counts.

Approximately 6 out of 10 dwelling units in the United States had the essential plumbing facilities of private bath, private flush toilet, and hot running water, and were not dilapidated. By this standard, nonfarm housing was of much better quality than farm housing; the ratios were 7 out of 10 for nonfarm dwelling units and 2 out of 10 for farm dwelling units. The poorest houses were those which were dilapidated or lacked running water inside the structure; the percentages were 15 for nonfarm and 60 for farm housing. Generally, renter-occupied units were of lower quality than owner-occupied units; units occupied by nonwhite households were of much poorer quality than those occupied by white households.

In the 1940 Census reports, the quality of dwelling units was indicated by the combination of data on state of repair and plumbing facilities. Because the concepts of "dilapidation" and "needing major repairs" represent different measures of structural level, the 1950 and 1940 results combining condition and plumbing facilities are not comparable. Further, the 1950 data recognize the availability of hot running water as an indicator of quality.

SUMMARY OF FINDINGS

XXXIII

FIGURE 8.—CONDITION AND PLUMBING FACILITIES: 1950

EQUIPMENT AND FUELS

Heating equipment, heating and cooking fuel.—One-half the occupied dwelling units in the United States in 1950 had central heating equipment. The proportions varied greatly between urban and rural areas and even more among geographic divisions. In the Middle Atlantic Division, 79 percent had central heating, in contrast to 12 percent in the West South Central Division. Of the units with central heating, more than half had warm air furnaces. The increase since 1940 in the number of units with warm air furnaces greatly exceeded the increase in the number with piped steam or hot water systems.

The number of units with central heating equipment does not represent the number of central heating installations. The majority of multi-unit structures have only one central heating system which serves all the units in the structure. The number of units with central heating, therefore, is considerably larger than the number of central heating installations.

Although the proportion of units which do not have central heating dropped since 1940, there was a net increase of approximately one million such units. The increase occurred in the South and West where there was considerable building activity and where, in many areas, climatic conditions do not require central heating. Eighty-two percent of all rural-farm dwelling units in the United States had noncentral heating equipment or were not heated; more than four-fifths of these had flue-connected stoves.

Coal, which was used as the principal fuel for heating in 35 percent of the occupied dwelling units, was used more extensively than any other fuel. Gas, which ranked second, was the principal fuel for heating 29 percent of the units; and liquid fuel, which ranked third, was reported for 23 percent of the units.

Although coal was still the predominant fuel for home heating, its importance declined considerably since 1940. Wood likewise declined in importance, although among rural-farm units it was used more than any other fuel. In contrast, the number of units using gas and the number using liquid fuel approximately tripled during the decade.

As the principal fuel for cooking, gas far outranked all the other fuels. It was reported as the principal cooking fuel used in 25.1 million units, which was 60 percent of the occupied dwelling units. Electricity was next, with 6.3 million (15 percent) using it as the principal cooking fuel. For both gas and electricity, the number increased substantially since 1940. In urban areas most of the households cooking with gas used utility gas, while in rural areas they used bottled gas.

FIGURE 9.—HEATING FUEL: 1940 AND 1950

The 1950 Census data on cooking fuel are not comparable with the data published by the utility industry on the number of residential customers.³

Electric lighting, refrigeration, radio, television.—The proportion of dwelling units with electric lighting has increased considerably—from 79 percent in 1940 to 94 percent in 1950. In urban areas, practically all dwelling units had electric lighting in both years. The improvement, therefore, was largely in rural housing. However, 22 percent of the rural-farm and 10 percent of the rural-nonfarm homes (including seasonal vacancies) still lacked electric lighting by 1950.

The number of households with mechanical refrigeration more than doubled during the 10 years, while the number with ice refrigeration was reduced to less than half as many as in 1940. Approximately 33,720,000 (8 out of 10) households had mechanical refrigeration in 1950, and 4,445,000 (1 out of 10) used ice. As with electric lighting, the increases were relatively greatest for rural-farm housing. The proportion of units having no mechanical or ice refrigeration varied from 4 percent for urban dwelling units to 25 percent for rural-farm units.

Over the past two decades, radios in the home have become more common until, by 1950, almost every home had one or more radios. The proportions increased rapidly—from 40 percent in 1930 to 83 percent in 1940, and to 96 percent in 1950. As with electric lighting and refrigeration, the increases were most pronounced for farm housing, paralleling to some extent the introduction of electricity into more rural areas. However, in 1950, there were a substantial number of farm homes with a radio but no electric lighting.

Television in the home was still relatively new in 1950 because mass production did not start until after the war. Its current importance as a means of communication, entertainment, and advertising is not evident from the 1950 Census. Approximately five million sets were reported, mostly in urban homes.

³ See p. xx for further explanation.

FINANCIAL CHARACTERISTICS OF NONFARM UNITS

Value and rent.—Changes in the price of housing over the past two decades are indicated by the value and rent data collected in the censuses.

The median price which owner occupants of nonfarm units estimated their properties would sell for was considerably higher in 1950 than in the two previous censuses. Median values dropped from \$4,800 in 1930 to \$3,000 in 1940, and then rose to \$7,400 in 1950. Although the units for which these values are reported are not exactly the same types of units for the three censuses, the medians may be compared. (See footnote 1 on table S.) Rents followed the same pattern, although to a smaller degree. The median contract monthly rent for nonfarm renter-occupied units decreased from \$27 in 1930 to \$21 in 1940, and increased substantially to \$35 in 1950. The 1950 median rent was 30 percent higher than the 1930 median. The intermediate 1940 data reflect the lower price of housing following the depression of the thirties.

The changes in rents and values between 1930, 1940, and 1950 do not indicate changes in price for identical units of housing. Because of a combination of factors, the rent and value data apply to largely different groups of renter units and owner units in the three censuses. Changes within the groups occurred as a result of (a) additions to the market of newly built units and units created by conversion, (b) losses from the market through demolition, destruction, or conversion to nonresidential use, and (c) shifting of units from one tenure status to another and between farm-nonfarm status. A large shift from renter to owner occupancy took place during the forties, while a shift in the opposite direction occurred during the thirties. The rents and values, therefore, are the result not only of an actual change in the price of identical units, but also of a change in the inventory of rental units and owner units. Thus, the Bureau of the Census data are not comparable to rent and value indices which measure price changes for identical units.

¹ 1950 value data are for 1-dwelling-unit structures without business and with only 1 dwelling unit in the property; 1940 data are for 1-family structures without business; and 1930 data are for the owner-occupied units in both 1-family and multi-family structures. Although the types of units for which values were reported are not the same for the 3 years, the differences are not large enough to invalidate comparison of the medians. In figure 12, the 1940 medians for urban and for rural-nonfarm units are for the owner-occupied units in both 1-family and multi-family structures.

² Not available.

Mortgage status.—The sale of several million new homes for owner occupancy and the great turnover among existing homes were accompanied by increased activity in the mortgage market. The figure of 7.8 million nonfarm owners who had mortgages on their properties in 1950 was approximately 3 million higher than the corresponding 1940 figure. Although the number increased significantly in the 10 years, repayments apparently offset new transactions at such a rate that the percentage of owner-occupied nonfarm units which were mortgaged remained about the same—45 percent in 1940 and 44 percent in 1950. The effect of this large volume of repayments was the increased number of debt-free homes. In 1950, about 10 million owner-occupied dwelling units were debt-free, representing an increase of about 70 percent over the 1940 count of 5.8 million.

From 1890 to 1920, the statistics show an increase for each decade in both numbers and percentages of mortgaged owner-occupied units. Since no mortgage data were collected in 1930, there is no evidence that the trend continued to 1940.

Mortgage statistics for 1940 and 1950 in this report are restricted to owner-occupied units in 1- to 4-dwelling-unit structures without business, while those for previous years represent all types of homes. However, the differences are not large enough to invalidate comparisons. Further, the mortgage statistics in this report are limited to counts of owner-occupied mortgaged dwelling units, while the data presented in Volume IV, *Residential Financing*, relate to characteristics of all mortgages and mortgaged properties.

TABLE T.—MORTGAGE STATUS OF NONFARM OWNER-OCCUPIED DWELLING UNITS: 1890 TO 1950

[For 1950 and 1940, the mortgage statistics are for owner-occupied dwelling units in 1- to 4-dwelling-unit structures without business. For 1920 and earlier, the mortgage data are for owner-occupied units in all types of structures. Although the types of units for which mortgage data were reported are not the same for all censuses, the differences are not large enough to invalidate comparisons]

Enumerator's Reference Manual

The following paragraphs on housing and population items were extracted from the Enumerator's Reference Manual for the 1950 Census of the United States.

HOUSING ENUMERATION

283. Housing items.—All entries for the Housing items are made on the Housing side of the Population and Housing Schedule. The Housing information for any set of living quarters will be related to the Population information for the people occupying those quarters.

284. When to fill Housing lines.—On the Housing side of the schedule, fill one line (that is, all applicable items on the line) for each occupied dwelling unit, each dwelling unit occupied by nonresidents, each vacant dwelling unit, and each nondwelling-unit quarters. (For definitions of these terms, see later paragraphs.) For nondwelling-unit quarters, fill only items 1 to 3. Although a line is used on the Population side for a household not at home on the first call, no line will be used or left blank on the Housing side of the same sheet. (See pars. 30 to 34.)

285. When to start a new sheet.—Start a new sheet (1) when Population lines are all filled even though

some Housing lines must be left blank, or (2) when Housing lines are all filled even though some Population lines must be left blank. In this way the information about the dwelling unit will always be on the same sheet as the Population information about the head of the household. Similarly, if the dwelling unit is vacant or occupied by nonresidents, the Housing information will always fall on the same sheet as the Population line for that unit.

286. How to obtain entries for the Housing items.—Some of the Housing items are printed as questions while others are printed as titles or headings. You must ask the printed questions as they appear on the schedule. This wording, in most instances, will give you the correct entries. For example: Ask item 9 as worded, "How many rooms are in this unit, not counting bathrooms?"

For items having titles or headings, phrase your question according to the

local situation. For example: For item 11, "Type of Toilet," you might ask, "Do you have a flush toilet inside this house?" However, you must not ask about the condition of a dwelling unit (item 7), and generally you can determine by observation the entries for structure characteristics (items 4, 5, and 6).

You are to ask as many questions as necessary to obtain the correct entry. Make one and only one entry in each applicable item. When more than one answer is possible, check the appropriate box that appears first in the list.

For occupied dwelling units, interview a responsible member of the household. For vacant dwelling units, obtain the information from the owner, owner's agent, building manager, or neighbor. Fill items 1 to 16 for all dwelling units; in addition, fill items 17 to 19 for the appropriate vacant dwelling units, items 20 to 22 for nonfarm units occupied by owner, and items 23 to 26 for nonfarm units occupied by renter.

LIVING QUARTERS TO BE ENUMERATED

Dwelling unit

287. Introduction.—People live in all kinds of places—houses, apartments, tents, trailers. Some houses are arranged just for one family, some for two or more families, and others, like apartment buildings, have living arrangements for dozens of families. Counting just houses and apartment buildings would not tell us much. We need some kind of unit to count, which more nearly describes all of these living arrangements. "Dwelling unit" is the name we give this unit.

288. General definition.—In general, a dwelling unit is a group of rooms or a single room, occupied or intended for occupancy as separate living quarters, by a family or other group of persons living together or by a person living alone.

289. Examples.—Ordinarily a dwelling unit is a house, an apartment, or a flat. It may also be a trailer, boat, tent, or railroad car, if occupied as living quarters. A dwelling unit may be located in a structure devoted primarily to business or other nonresidential use, such as quarters in a warehouse where the watchman lives, or a barber's quarters back of his shop.

290. Specific definition.—A group of rooms or a single room, occupied or intended for occupancy by a family or group of persons living together or by a person living alone, is a dwelling unit if it has:

a. Separate cooking equipment,
or

b. Two or more rooms and separate entrance.

Exception: A one-room apartment in a regular apartment house, or one room which is the only living quarters in the structure, is a dwelling unit even though it does not have separate cooking equipment.

Living quarters which do not fulfill one of the conditions above are combined with the landlord's quarters, or

with each other if the landlord does not live in the structure. If the combined quarters contain fewer than 10 lodgers, they are considered one dwelling unit. If the combined quarters contain 10 or more lodgers, they are considered one "nondwelling-unit quarters."

How to apply dwelling-unit definition

291. Occupied dwelling units.—The decision as to what constitutes one dwelling unit is to be made on the basis of the living arrangements of the occupants, and not on relationship. For example, a family with married children in the same house or apartment, sharing the same rooms and eating together, occupies one dwelling unit. On the other hand, if a married son or daughter, lodger, or any person or group lives in another part of the house with separate cooking equipment, or if any live in separate quarters consisting of two or more rooms and separate entrance, such persons occupy separate dwelling units.

In all places where people live, determine what the dwelling unit is and which persons live in that one dwelling unit. You must do this at the beginning of the interview, so that you will know which persons to list as one household on the Population side of the schedule, and which living quarters are one dwelling unit for the questions on the Housing side of the schedule. The entire group of persons who live in one dwelling unit is one household.

Do not ask the respondent if he lives in a "dwelling unit." Ask him about the people who live there and their living arrangements. Then you can determine if there is only one dwelling unit or if there is more than one dwelling unit. Start with such questions as:

Who lives here?

How are they related to each other?

Is there more than one family living here?

Does your family occupy the whole house or only part of it?

Ask about *all* the people and *all* the living quarters in the house, so that you will not miss any dwelling units.

292. A single family or a person living alone.—A whole house occupied, or intended for occupancy, by a single family or by a person living alone is one dwelling unit.

One room which is the only living quarters in the structure is a dwelling unit even though it does not have separate cooking equipment.

Similarly, in a regular apartment house, each apartment is one dwelling unit if it is occupied or intended for occupancy by a single family or by a person living alone. Usually such apartments have separate cooking equipment or consist of two or more rooms and a separate entrance. However, in a regular apartment house, you may find one-room apartments without cooking equipment; enumerate each of these apartments as a separate dwelling unit.

293. Two or more families; groups of persons; lodgers.—In some cases, you will find that several families or groups of persons live in the same house or structure. They may be distinctly separate families or groups of persons; they may be family groups related to each other (parents and married sons or daughters, for example); or they may be lodgers (roomers). Before you list such persons as one household, ask as many questions as necessary to determine whether any of the families, groups, or lodgers occupy separate dwelling units. Ask *first* whether any of the families or lodgers have cooking equipment for their exclusive use. If you determine they do *not* have separate cooking equipment, then ask whether they have two or more rooms for their exclusive use. (See instructions for counting rooms, par. 335. Note that a bathroom is not counted as a room.) Usually you can observe whether they have a separate entrance. Enumerate as a separate dwelling unit each of the quarters of the families, groups, or lodgers who have either separate cooking equipment or two or more rooms and separate entrance.

294. Lodgers' quarters.—Combine the quarters which do not have separate cooking equipment or two or more rooms and separate entrance with the quarters of the landlord. If the landlord does not live in the structure, combine all such quarters with each other; designate one of the persons as "Head" and each of the persons unrelated to him as "Lodger."

If there are fewer than 10 lodgers (roomers) in the combined group, consider the combination as one dwelling unit.

If there are 10 or more lodgers (roomers) in the combined group, consider as one "nondwelling-unit quarters."

In the count of lodgers, count only the lodgers whom you enumerate as residents of this unit (that is, only those lodgers who are to be listed as members of the household on the Population side of the schedule). Partners, hired

hands, servants, foster children, wards, and the like, are *not* to be counted as lodgers.

295. Separate cooking equipment.—Consider a unit as having separate cooking equipment if it has:

a. A regular range or stove for the exclusive use of the occupants, whether or not it is used;

or

b. Other cooking equipment (gas hot-plate, electric plate, etc.) and either (1) the equipment is used for preparing meals, or (2) most of the living quarters in the structure have some kind of cooking equipment for preparing meals.

"Separate" equipment means equipment for exclusive use (see par. 339).

296. Separate entrance.—Consider a unit as having a separate entrance if the occupants can reach their quarters directly through an outside door, or if they can reach their quarters through a common hall and do not have to pass through a room of any other occupant.

297. Vacant dwelling units.—To identify vacant dwelling units, follow a procedure similar to that for occupied dwelling units. A dwelling unit is vacant if no persons are living in it at the time of enumeration. If the occupants are only temporarily absent, consider the unit as occupied. (See also pars. 359 to 364.)

When inquiring about persons and living quarters in a structure, be sure to inquire whether there are vacant living quarters in the structure or elsewhere on the property. Otherwise, dwelling units will be missed.

298. Cooking equipment for vacant dwelling units.—Because many people have their own stoves for cooking and take them when they move, you may find vacant dwelling units from which the cooking equipment has been removed. Consider such vacant living quarters as having separate cooking equipment if the last occupants had separate cooking equipment.

299. Vacant, under construction.—New dwelling units not yet occupied should be enumerated as vacant dwelling units when all the exterior windows and doors are installed and final usable floors are in place. If new construction has not proceeded to this point, do not consider the unit as living quarters and do not enumerate it.

300. Vacant, being remodeled or converted.—In structures where conversion or remodeling is taking place, enumerate the dwelling units as they will

be when the conversion or remodeling has been completed. For example, if a single dwelling unit is being made into two dwelling units, enumerate as two dwelling units.

301. *Vacant, dilapidated.*—Enumerate vacant dwelling units if they are intended for occupancy as living quarters even though they are dilapidated. However, if the unit is unfit for use and beyond repair so that it is no longer considered living quarters, do not enumerate it.

302. *Vacant, used for nonresidential purposes.*—Enumerate a vacant dwelling unit which is being used for nonresidential purposes (storage, etc.) provided it is intended to be used only temporarily as such. If it has been permanently converted to storage or other nonresidential use, it is no longer a dwelling unit and should not be enumerated.

Nondwelling-unit quarters

303. *Nondwelling-unit quarters in a large rooming house, institution, hotel, tourist court, etc.*—The combined living quarters with 10 or more lodgers (roomers) are enumerated as one nondwelling-unit quarters. Other nondwelling-unit quarters include quarters in a *transient* hotel, tourist court, motel, or motor court. They also include living quarters whose occupants have common living arrangements, such as a dormitory, bunkhouse, nurses' home, convent, monastery, institutional structure(s) containing living quarters for inmates or patients, and barracks for enlisted personnel in a military installation. (For most of the nondwelling-unit quarters, you will have made an entry in item e on the Population side of the schedule as instructed in par. 84. See also "How to Enumerate Special Types of Living Quarters," par. 306.)

Illustrations of living quarters

304. *Illustrations.*—Various living arrangements are described on pages 136 & 137 to illustrate the application of the definition of dwelling unit and nondwelling-unit quarters.

Special types of living quarters

305. *Special types.*—In addition to regular living quarters, there are special types of places where people live such as institutions, hotels, tourist courts, and military installations. Some of these places will have dwelling units but in most instances they will be nondwelling-unit quarters.

Enumeration of these places generally will be different from the regular procedure. Some of them will be included in the regular enumeration and others will be done by special as-

signment. Whether you are enumerating these places by special assignment, or during the regular enumeration, follow the procedure outlined in paragraph 306.

306. *How to enumerate special types of living quarters.*—

Rooming house, lodginghouse, tourist home.

Enumerate as a separate dwelling unit each of the quarters which have either separate cooking equipment or two or more rooms and separate entrance.

Quarters which do not fulfill either condition are to be combined with the quarters of the landlord, or with each other if the landlord does not live in the structure. If the combined quarters contain fewer than 10 lodgers (roomers), enumerate the combination as one dwelling unit (box 1 in item 3—house, apartment, flat); if the combined quarters contain 10 or more lodgers, enumerate the combination as nondwelling-unit quarters (box X in item 3) on one Housing line.

Hotel, lodge, motel, motor court, tourist court.

Before you start to enumerate in a hotel, lodge, motel, motor court, etc., determine whether the majority (more than one-half) of the rooms, suites, or other accommodations are "permanent" or "transient." Permanent accommodations are those occupied or reserved for occupancy by guests who seek lodging for a period of time usually a month or more and who are as a rule granted reductions from the daily or weekly rates. The remaining quarters should be considered transient accommodations.

Permanent.

If the majority of the accommodations in the hotel, motor court, etc. are permanent, apply the following rules to all of the accommodations, whether they are usually occupied by permanent guests, occupied by transients, or vacant. Enumerate as a separate dwelling unit (box 1 in item 3) each of the quarters which have either (a) separate cooking equipment, or (b) two or more rooms which are rented as a suite. Do not consider as a suite, a group of sleeping rooms which are temporarily rented together but which are usually rented separately.

Combine the remaining quarters and enumerate the combination as nondwelling-unit quarters (box X in item 3) on one Housing line.

Transient.

If the majority of the quarters are for transients, combine all the quarters in the hotel, motor court, etc., and enumerate the combination as nondwelling-unit quarters (box X in item 3) on one Housing line, regardless of the living arrangements of the occupants.

Separate structure for apartment use.

If the hotel management operates a separate structure as a regular apartment house, enumerate each apartment as a separate dwelling unit (box 1 in item 3).

306. How to enumerate special types of living quarters.—Continued

Dormitory, sorority house, fraternity house, residential club, bunkhouse, convent, monastery, nurses' home, "flophouse," mission, Y, Salvation Army shelter.

Enumerate the structure as nondwelling-unit quarters (box X in item 3) on one Housing line, regardless of the living arrangements of the occupants.

Institution or general hospital:

Building containing only family quarters for staff members.

Enumerate each of the family quarters as a separate dwelling unit (box 1 in item 3).

Building(s) containing living quarters for nonstaff members, such as patients or prisoners, and building(s) containing living quarters for staff members not in families.

Enumerate the structure or group of such structures as nondwelling-unit quarters (box X in item 3) on one Housing line, regardless of the living arrangements of the occupants.

Military installation:

Barracks, bachelor officers' quarters, base hospital.

Do not make any entries on the Population and Housing Schedule. Persons will be enumerated on ICR's by special assignment.

Building containing only family quarters.

Enumerate each of the family quarters as a separate dwelling unit (box 1 in item 3).

Transient quarters.

Combine all the transient quarters and enumerate the combination as nondwelling-unit quarters (box X in item 3) on one Housing line, regardless of the living arrangements of the occupants.

Trailer, tent.

Enumerate as a separate dwelling unit each trailer (box 2 in item 3) and each tent (box 3 in item 3) whether singly or in a camp, if it is occupied as separate living quarters. If the trailer or tent is vacant, do not enumerate it.

HOUSING ITEMS**Identification of living quarters**

307. Sheet number.—Copy at the top (left) of the Housing side of the schedule the sheet number that appears at the top (right) of the Population side. Both sides of the sheet will have the same number.

308. Item 1. Serial number of dwelling unit.—Copy the serial number of the unit from item 3 of the Population side of the schedule. You will have assigned a serial number to each occupied dwelling unit, each dwelling unit occupied by nonresidents, each vacant dwelling unit, and each nondwelling-unit quarters. (See also pars. 30 to 36 and par. 93.)

On the Housing side of the schedule, these serial numbers must be in consecutive order except for the numbers assigned to callbacks. However, on the "out-of-order" sheets, the serial numbers may be in any order. When you have completed your ED, the number of Housing lines used should equal the highest serial number assigned to that ED.

309. Item 2. Block number.—If your ED is divided into blocks, these blocks have been numbered (by the Census Bureau, by your Crew Leader, or by you as instructed in par. 9). Copy in item 2 the number of the block in which this dwelling unit is located. If your ED is not divided into blocks, leave item 2 blank.

Type of living quarters

310. Item 3. Type of living quarters.—Classify the living quarters as either a "dwelling unit," or "nondwelling-unit quarters in a large rooming house, institution, hotel, tourist court, etc." Classify the living quarters which are dwelling units in one of the following three categories: (1) House, apartment, flat, (2) trailer, (3) tent, boat, railroad car.

311. House, apartment, flat.—Any dwelling unit which is not a trailer, tent, boat, or railroad car belongs in the group "House, apartment, flat." Include in this category not only the ordinary houses and apartments but also such dwelling units as apartments in hotels, flats over or behind stores, apartments over garages, janitor's quarters in a nonresidential building, and living quarters in structures such as barns and sheds which have been converted to residential use.

312. Trailer.—A trailer which is still on wheels or has been set on a temporary foundation belongs in this category. However, if it has been set on a permanent foundation or if one or more rooms have been built onto it, report it as "House, apartment, flat." Do not enumerate a trailer if it is vacant or used merely as an extra sleeping room.

313. Tent, boat, railroad car.—Include in this category only tents, boats, or railroad cars occupied as separate living quarters. Do not enumerate a vacant tent, boat, or railroad car.

314. Nondwelling-unit quarters in large rooming house, institution, hotel, tourist court, etc.—Identify nondwelling-unit quarters according to the instructions in paragraphs 303 and 306.

Structure characteristics

315. Items 4, 5, and 6. Structure.—A separate structure:

- a. Has open space on all four sides,
- or
- b. Has vertical walls dividing it from all other structures.

For example, a house with open space on all four sides is a separate structure. In row houses, each house is a separate structure; in twin houses, each house is a separate structure if the wall between goes from ground to roof.

ILLUSTRATIONS OF LIVING QUARTERS

**1—Single-family house**

A farmer, his wife, and their five small children occupy the whole house.

The entire house is occupied by only one family; it is one dwelling unit.

For "Type of Living Quarters," check box 1, "House, apartment, flat."

**2—Regular apartment house**

This is a floor of a regular apartment house. Each numbered unit is occupied by a couple or by a person living alone.

Apartments 1, 2, 3, 4, and 7 have separate cooking equipment and therefore are separate dwelling units. Apartments 5

and 6 are one-room apartments in a regular apartment house and are separate dwelling units even though they have no separate cooking equipment and consist of only one room.

For each of the seven apartments, check box 1, "House, apartment, flat."

**3—House with related family group—two dwelling units**

A widowed mother occupies the three rooms labeled A. She has a coal stove which she uses for cooking.

Her son and his wife live here, too, but they have two rooms of their own, labeled B. The son and wife cook their meals on their 3-burner electric hotplate.

A and B are separate dwelling units because each has separate cooking equipment. (A has a regular stove, and B has a hotplate which the occupants use for preparing meals.)

For each of the two dwelling units, check box 1, "House, apartment, flat."

**4—House with related family group and lodgers—one dwelling unit**

This house is occupied by a man and his wife, their married daughter and her husband, and two lodgers.

The married daughter and her husband do not have their own cooking equipment nor do they have exclusive use of two or more rooms with separate entrance. The lodgers share one room and have no cooking equipment.

Neither the younger couple nor the lodgers have a separate dwelling unit. Their quarters are combined with the quarters of the head and wife, and the combined quarters contain fewer than 10 lodgers.

The entire house constitutes one dwelling unit.

Check box 1, "House, apartment, flat."

5—Dwelling units with two or more rooms and separate entrance

A man and his wife occupy the rooms on the first floor. A married couple and their daughter occupy the three rooms on the second floor. Although the two families cook at different times and eat separately, they use the same kitchen. Each of the quarters has its own entrance.

Neither the first-floor unit nor the second-floor unit has separate cooking equipment.

However, each of the quarters is a separate dwelling unit because each has two or more rooms and a separate entrance. (For the count of rooms, the shared kitchen is counted with the first-floor unit.)

For each of the two dwelling units, check box 1, "House, apartment, flat."

6—One-room dwelling units with separate cooking equipment

The owner converted his house to accommodate several families. He kept three rooms (labeled A) including a kitchen with a gas range, for his own use. He furnished the remaining rooms, B, C, and D, as studio rooms with 2-burner gas hotplates for cooking.

A mother and daughter live in B, a man and his wife in C, and one woman in D. The woman in D seldom cooks but the occupants of the other quarters use their stoves for preparing practically all their meals.

Each of the four quarters is a separate dwelling unit because each has separate cooking equipment. (A has a regular gas range; B and C have hotplates which the occupants use for preparing meals; and the hotplate in D is considered separate cooking equipment because most of the quarters in the structure have cooking equipment for preparing meals.)

For each of the four dwelling units, check box 1, "House, apartment, flat."

7—Vacant dwelling unit

A man, his wife, and son occupy the three rooms labeled A. They have a regular gas stove for cooking.

The wife says there are three vacant rooms in the back (labeled B). The previous tenants in B had their own gas range which they took with them. The new tenants will move in tomorrow.

A and B are separate dwelling units because each has separate cooking equipment. (The vacant dwelling unit B is considered as having separate cooking equipment because the previous occupants had a regular range for cooking.)

For each of the two dwelling units, check box 1, "House, apartment, flat."

8—Large rooming house — non-dwelling-unit quarters

The landlady has a room and kitchen on the first floor. She sublets the remaining 11 rooms in the house as sleeping rooms, with one person occupying each room.

The woman in room 6 has a 1-burner electric hotplate which she uses for occasional snacks. The other roomers have no cooking facilities.

None of the lodgers' quarters are separate dwelling units because none have separate cooking equipment or two or more rooms

with separate entrance. (Room 6 is not considered as having separate cooking equipment; it has only a hotplate for occasional use.)

The lodgers' quarters are combined with the landlady's quarters. Because the combined quarters of the head and lodgers contain "10 or more lodgers," enumerate the combination as one nondwelling-unit quarters.

Check box X, "Nondwelling-unit quarters."

In apartment developments or in housing developments of the village or garden type, each building with open space on all sides is a separate structure.

If a shed, private garage, etc., adjoins the house, do not consider such attachment as a separate structure.

Usually you can obtain the entries for items 4, 5, and 6 by observation. Make the same entries for each of these items for all dwelling units within the same structure. For example, for a detached apartment house with 24 apartments and with a store on the first floor, the answers for items 4, 5, and 6 should be "detached," "24," and "Yes" for each of the 24 Housing lines.

316. Item 4. Type of structure.—Structures are classified into three groups:

a. A *detached* structure has open space on all four sides.

b. A *semidetached* structure has only one wall attached to an adjoining residential structure and is one of only *two* such residential structures. Each of these two structures must have open space on the remaining three sides.

c. An *attached* structure has one or more walls attached to an adjoining structure and is:

(1) One of 3 or more such structures (either residential or nonresidential),

or
(2) One of 2 such structures, one of which is nonresidential.

Each house in a "row" of 3 or more houses, including the end house, is attached. Also, a house having a common wall with a nonresidential structure, such as a store or factory, is attached. (Consider as nonresidential a structure devoted primarily to nonresidential use, even though it may contain living quarters.)

317. Illustrations of structures.—For illustrations of various types of structures, see pages 140 and 141.

318. Item 5. Number of dwelling units in the structure.—Report the number of dwelling units in the structure. Do not include any nondwelling-unit quarters (box X in item 3) in this count.

Include vacant as well as occupied dwelling units. Be sure to count the dwelling units in this structure which are enumerated on the "out-of-order" sheets.

If there is more than one dwelling unit in the structure, you should enter the same total for each dwelling unit in the structure.

319. Item 6. Business unit in structure.—The usual type of business unit is a commercial establishment such as a regular store, shop, or restaurant.

Some activities carried on in the home could be businesses for purposes of the occupation, industry, and income questions on the Population side of the schedule, but are not considered business units for Housing. For example, one or two rooms used as a doctor's office, a music studio, and the like, by a person living in the dwelling unit, are *not* business units for purposes of the Housing questions. Similarly, the serving of meals to boarders who live in the structure, renting rooms, and selling home-grown produce are not businesses for purposes of this item.

Condition of unit

320. Item 7. Condition of unit—Purpose.—This item is to provide information about the quality of our housing. We need to know how many dwelling units are not doing their job of providing adequate shelter, and, in their present condition, endanger the health, safety, or well-being of their occupants. The item on dilapidation will provide part of this information.

321. Definition of dilapidation.—Report a dwelling unit as dilapidated when it has serious deficiencies, is run-down or neglected, or is of inadequate original construction so that the dwelling unit does not provide adequate shelter or protection against the elements or it endangers the safety of the occupants. A dwelling unit should be reported as dilapidated if, because of either deterioration or inadequate original construction, it is below the generally accepted minimum standard for housing and should be torn down, extensively repaired, or rebuilt.

322. How to apply the definition of dilapidation.—Do not ask the respondent about this item. On the basis of your own observation, determine whether the unit is dilapidated. If you decide that the unit is dilapidated on the basis of your observation of the exterior, report it as dilapidated even though the interior may be in good condition. Similarly, even though the exterior is in good condition, report the house as dilapidated if the interior is dilapidated. Likewise, the front of the house may be in good condition but observation of the sides or rear may reveal signs of dilapidation.

Observe the interior of the dwelling unit while you are conducting the interview. If you have the slightest doubt about the condition of a unit when enumerating at night, you must observe it during the daytime.

You cannot see all of the bad features which make a dwelling unit dilapidated. Some deficiencies, such as enclosed joists or beams which are termite-ridden or rotted, could be revealed only by an engineering survey. Other defects, such as lack of adequate light or ventilation, or the presence of dampness or infestation, would be observed only by a more careful inspection of the dwelling unit, which is not always possible in the Census. But you can easily see certain defects which will help you determine whether the unit is dilapidated; these defects are not only significant in themselves but are indications of other defects which you cannot easily see.

The types of deficiencies you are to look for relate to weather tightness, the extent of disrepair, hazards to the physical safety of the occupants, and inadequate or makeshift construction.

In most units that are dilapidated, you will find a number of deficiencies. In some cases, however, a single deficiency will be critical enough in itself to warrant classifying the unit as dilapidated; for example, a sagging wall or roof indicates the lack of proper support and the unsound condition of the structure as a whole. In other cases, there may not be any one critical deficiency, but there will be a combination of minor deficiencies in sufficient number and extent to justify classifying the unit as dilapidated. In still other cases there may be no evidence of deterioration, but the dwelling unit is so inadequately constructed that it should be classified as dilapidated.

A dwelling unit is dilapidated because of:

- a. One or more critical deficiencies,
- b. Combination of minor deficiencies, or
- c. Inadequate original construction.

323. Critical deficiencies.—If you observe a single deficiency which is serious enough in itself to warrant classifying the unit as dilapidated, you need not look any further for other defects. Examples of such critical deficiencies are:

- a. Holes, open cracks, rotted, loose, or missing materials (clapboards, shingles, bricks, concrete, tile, plaster, floor boards) over a considerable area of the (1) foundation, (2) outside walls, (3) roof, or (4) inside walls, floors, or ceilings.

b. Substantial sagging of floors, walls, or roof.

c. Extensive damage by storm, flood, or fire.

324. Minor deficiencies.—Classify a dwelling unit as dilapidated when minor deficiencies are present in sufficient number and extent to give evidence that the dwelling unit does not provide adequate shelter or protection against the elements or is physically unsafe. Examples of these deficiencies are:

a. Holes, open cracks, rotted, loose, or missing materials in the foundation, walls, roof, floors, or ceilings but not over a considerable area. (See par. 323a.)

b. Shaky or unsafe porch, steps, or railings.

c. Broken or missing window panes (often the holes will be plugged with paper, cloth, or tin).

d. Rotted or loose window frames which are no longer rainproof or windproof.

e. Damaged, unsafe, or makeshift chimney (a makeshift chimney is a stovepipe or other uninsulated material leading directly from the stove to the outside through a hole in the roof, wall, or window).

f. Inside stair treads or risers, balusters, or railings that are broken, loose, or missing.

g. Deep wear on doorsills, doorframes, outside or inside steps or floors.

325. Inadequate original construction.—Consider as dilapidated those dwelling units which do not provide adequate protection against the elements because of makeshift or inadequate construction. Examples of inadequate construction are:

a. Makeshift walls (walls covered with roofing paper or made of packing boxes, scrap lumber, or tin).

b. Lack of foundation (walls resting directly on the ground).

c. Dirt floors.

d. Cellars, garages, barns, and similar places (not originally intended for living quarters) which have been inadequately converted.

Cautions in appraising condition

326. Paint.—The mere lack of paint does not in itself justify classifying the unit as dilapidated. On the other hand, the presence of a fresh paint job should not keep you from examining a unit for deficiencies.

327. Masonry, tar-paper covering.—

Do not let the sturdiness of masonry walls or walls which appear to be in good condition because of tar paper or composition-shingle covering keep you from looking at other parts of the structure for signs of dilapidation.

328. Age of structure.—A unit does not have to be old to be dilapidated; a shack, for example, is seriously deficient even when brand new. Conversely, a house built many years ago is not necessarily dilapidated.

329. Neighborhood.—Your appraisal of a unit should be made uniformly, regardless of neighborhood or race. Follow the same rules whether the unit is in a good section or in a poor section; whether it is in a white neighborhood or in a nonwhite neighborhood; whether it is in the country or in the city.

330. Multiunit structure.—Most deficiencies apply to the structure. If parts of the structure which are common to all units in the structure are dilapidated (for example, if the outside walls are dilapidated), report all units in the structure as "dilapidated." Otherwise, appraise each unit separately.

331. Undergoing repairs.—If a unit is undergoing repairs at the time of enumeration, report its condition as it will be when the repairs are completed. For example, if repairs are being made on a dilapidated unit and it will still be dilapidated when the repairs are completed, report the unit as "Dilapidated"; on the other hand, if repairs are being made to the extent that the unit will not be dilapidated when the repairs are completed, report it as "Not dilapidated."

332. Attachments.—In appraising a house, consider an attached room or shed only if it is used as part of the main living quarters. Ignore the condition of a shed or an attachment used for storage or other nonresidential purposes.

Photographs illustrating condition

333. Photographs illustrating condition of a dwelling unit.—The photographs following p. 147 illustrate various deficiencies which you are to look for when appraising the condition of a house.

Persons in dwelling unit

334. Item 8. Review of number of persons listed for this dwelling unit.—

There should be an entry in item 8 for every dwelling unit. If the unit is occupied entirely by nonresidents, check the box "Occupied entirely by nonresidents." If the unit is not occupied, check the box "Vacant." In all other instances, ask the coverage questions as worded, inserting the number of persons who have been listed on the Population side of the schedule. Give the respondent an opportunity to answer each part of the question before proceeding to the next.

Add the names of any members of the household who may have been missed to those already enumerated on the Population side of the schedule, and complete the enumeration of the missed persons. Enter in the space for the final count, the final determination of the number of persons enumerated as members of the household. If, subsequently, any change is made in the number of persons enumerated in this dwelling unit, cancel the incorrect entry and enter the corrected total.

Number of rooms

335. Item 9. Number of rooms.—Count only *whole rooms* such as kitchens, bedrooms, dining rooms, living rooms, permanently enclosed sunporches of substantial size; finished basement or attic rooms, recreation rooms, or other rooms suitable or used for living purposes; and rooms used for office purposes by a person living in the dwelling unit. Count as a separate room a kitchen, kitchenette, or "half-room" which is partitioned off from floor to ceiling; but count as only one room a combined kitchenette and dinette separated only by shelves or cabinets.

Do not count: Bathrooms, strip or pullman kitchens, halls or foyers, alcoves, pantries, laundries, closets or storage space, unused basement or attic rooms not suitable for living quarters, rooms subleased for office purposes by a person not living in the dwelling unit, and rooms used for business purposes in a dwelling unit with a business.

Count all rooms in the dwelling unit; include rooms for lodgers if such rooms are part of the dwelling unit you are enumerating. If there are several dwelling units in a house, make sure that the rooms you are counting are only for the dwelling unit you are enumerating.

APARTMENT DEVELOPMENT

Each building is
1 detached structure
10 units

(In apartment developments, each building with open space on all sides is one detached structure)

The diagram illustrates two types of residential structures. On the left, a 'semi-detached structure' is shown, consisting of two identical units sharing a common side wall. Each unit has a front door, a front window, and a side window. On the right, a 'detached structure' is shown, consisting of two identical units that are completely separate from each other. Each unit has a front door, a front window, and a side window.

The diagram shows five identical, side-by-side attached structures. Each structure is a two-story building with a gabled roof. The front facade features a door on the ground floor and two windows on the upper floor. A dashed horizontal line separates the ground floor from the upper floor. Below each structure, the text '1 unit' is written. The structures are connected to a common foundation, indicated by a single line at the bottom.

In the case of kitchens (or other rooms) shared by occupants of two or more dwelling units, include the kitchen as a room in the dwelling unit to which it is most readily accessible.

All rooms that are suitable for living quarters, even though they are not used at the time of enumeration, must be included.

Equipment, facilities, fuel, and year built

336. Items 10 to 15. Equipment and facilities.—In answering items 10 to 15, determine what equipment or facilities are available for the use of the occupants of the dwelling unit you are enumerating. For units under construction or conversion, however, consider the unit as having the equipment available for use if it will be installed by the time the construction is completed.

If more than one type is available, check the appropriate type which appears first in the list for that item. An entry should be made in each of these items for vacant as well as occupied dwelling units.

337. Equipment out of order.—Consider a unit as having the equipment even if it is temporarily out of order or not being used because of the high cost or inconvenience of operation. Do not consider the unit as having the equipment if it has been out of order for some time and there is little likelihood of immediate repair.

338. Inside this structure; outside this structure.—In answering items 10, 11, 13, and 14d, you will have to distinguish between "inside this structure" and "outside this structure." To be "inside this structure," the equipment must be located in this dwelling unit, or elsewhere in this structure such as in a common hallway or in a room used by several households in the structure. It may even be necessary to go outdoors to reach the part of the structure in which it is located. Equipment on an open porch is "outside this structure"; however, if the equipment is located in an enclosed porch, consider it as "inside this structure."

339. Exclusive use; shared.—For items 12, 13, and 14d, you must distinguish between "exclusive use" and "shared."

a. Exclusive use.—Equipment is "for this unit's exclusive use" when it is used only by the persons in the dwelling unit you are enumerating. If

there is only one dwelling unit in the whole house or structure, equipment which is located inside this structure should be reported, "For this unit's exclusive use." If the equipment is used by lodgers, as well as other persons in this dwelling unit, it is still for this unit's exclusive use provided that it is not used by occupants of another unit.

b. Shared.—"Sharing" occurs when occupants of two or more units use the same equipment. Report as "shared," equipment which would be used also by the occupants of a unit now vacant, if that unit were occupied. If the occupants of a dwelling unit and those in nondwelling-unit quarters use the same equipment, report the equipment as shared. Sharing occurs frequently in houses which have been converted to several units and the equipment is available for the use of the occupants of more than one unit.

340. Item 10. Piped water supply.—Water piped from a pressure or gravity system is "piped running water." If piped running water is available for the dwelling unit, determine whether it is inside or outside this structure. (See pars. 336 to 338.)

A dwelling unit has hot piped running water if piped hot water is available all year round or only part of the time. It need not be continuously available; for example, if hot water is available only during the heating season or at various times during the week, report the unit as having hot piped water.

Water from a hand pump is not piped running water. Check box 4 for hand pump, well, stream, etc., if no piped running water is available.

If more than one type of water supply is available for a dwelling unit, either for household or drinking purposes, report the type which appears first on the schedule.

341. Item 11. Type of toilet.—A toilet is a flush toilet if it is operated by means of water piped to it. A flush toilet may be located outside the structure but usually it is inside. When more than one type of toilet facility is available for a dwelling unit, report the facility which appears first on the schedule. For example, if there is a flush toilet inside the structure, and also an outside toilet, check the box, "Flush toilet inside this structure." The term "inside this structure" is defined in paragraph 338. (See also pars. 336 and 337.)

342. Item 12. Toilet—exclusive use.—Determine whether the type of toilet reported in item 11 is for exclusive use. For definition of "exclusive use" see paragraph 339.

343. Item 13. Installed bathtub or shower.—A bathtub or shower is installed if it has running water piped to it. Furthermore, it must be located inside the structure to be reported in category 1 or 2. If an installed bathtub or shower located inside the structure is available for the dwelling unit, check box 1 or 2 depending on whether it is for exclusive use of the dwelling unit you are enumerating. The terms "inside this structure" and "exclusive use" are defined in paragraphs 338 and 339. (See also pars. 336 and 337.) An installed bathtub or shower located outside the structure is to be reported in box 3, "No bathtub or shower for this unit." Also check box 3 if the only facility for bathing is a washtub, portable bathtub, or other makeshift arrangement.

344. Items 14 and 15. Explanation.—Not all of items 14a through 14e and 15a through 15d are answered for every dwelling unit. When you enumerate a dwelling unit, answer only the items which are on the line you are filling. The large encircled figures on this part of the schedule are not the item or line numbers; they are for office use only.

345. Item 14a. Heating equipment.—Report the equipment available for heating the dwelling unit during the winter months. Report a usable heating system or furnace even though it may be temporarily out of order or is not in operation because of cost or inconvenience.

a. Piped steam or hot water.—Include radiators (and pipes), radiant, panel, and baseboard heating systems in this category.

b. Warm-air furnace.—Check this box for either "piped" or "pipeless" warm-air furnaces. A piped warm-air furnace has pipes which conduct warm air to various rooms in the dwelling unit. A pipeless warm-air furnace is usually located in the basement or utility room with one grille directly above or adjacent to the furnace. Floor and wall furnaces are included in this category.

c. Other means—with flue.—Check this box for fireplaces and flue-connected heating stoves. A flue is a pipe or enclosed passage to carry the smoke or fumes from the equipment to the outside of the structure. The

flue must be connected to a chimney or lead directly to the outside through a hole in the wall or window.

Flue-connected heating devices are generally oil-, wood-, or coal-burning heaters with a stove pipe connected to a flue in the wall or ceiling. Flue-connected stoves or ranges which are used primarily for cooking are included in this category if they are the only source or the major source of heat for the dwelling unit.

d. Other means - no flue.—Check this box for any type of heating equipment which is not flue-connected, such as electric heaters (including coil wall heaters) and portable kerosene heaters.

346. Item 14b. Electric lighting.—A dwelling unit has electric lighting if it is wired for electric lights even though the service may be temporarily discontinued.

347. Item 14c. Radio.—Check “Yes” for a radio even though it is temporarily out of order or is being repaired elsewhere. If there is only a television set in the unit, check “No” for this item.

348. Item 14d. Kitchen sink.—The kitchen sink must have a drain pipe which carries waste to the outside, and must be located inside this structure, to be reported in category 1 or 2. It need not have running water piped to it. Usually it is located in the kitchen; however, a sink (with drain pipe to the outside) which is located in a hall, pantry, enclosed porch, or room adjacent to the kitchen, and used in the washing of dishes or cooking utensils, is also a kitchen sink. A washbowl, basin, or lavatory located in a bathroom or bedroom is *not* a kitchen sink. A sink with only a bucket to collect waste is to be reported, “No kitchen sink.” See paragraphs 338 and 339 for definitions of “inside this structure” and “exclusive use.” (See also pars. 336 and 337.)

349. Item 14e. Year built.—The year a structure was built means the calendar year in which construction was completed. This refers to the original construction of the building, not to any later remodeling, additions, reconstruction, or conversion. If the owner is an occupant of the structure, find out from him the year built; if the owner is not available, find out the year built from the renter. If the occupants themselves do not know the year built, ask persons who have lived in the neighborhood for a long time.

If necessary, suggest ways of estimating the age of the structure by asking the occupant how long he (or his family) has lived in this house, whether it was new when he moved in, etc.

If neither the occupants of the structure nor the neighbors know when it was built, enter your best estimate for the 10-year period if the house was built prior to 1940 (1930 to 1939, 1920 to 1929, 1919 or before); or enter the best estimate for the year if the house was built in 1940 or later.

If the construction of the house is not completed, enter “1950.”

In a structure containing more than one dwelling unit, the entry for “year built” should be the same for all dwelling units in that structure.

350. Item 15a. Heating fuel.—Check the one fuel that is used most for heating. If two fuels are used for equal periods, check the one appearing first in the item. If the response is “gas,” ask whether it is “utility” or “bottled” gas.

a. Utility gas.—Utility gas is always piped into the dwelling unit from mains leading from a central system, which is owned and operated generally by a public utility company or by the municipal government. It may be either manufactured or natural.

b. Bottled gas.—Bottled gas is supplied to the consumer in containers (bottles or tanks) which are replaced or refilled as needed. Bottled (or tank) gas is frequently known by a trade name.

c. Liquid fuel.—Liquid fuel includes fuel oil, furnace oil, distillate oil, kerosene, coal oil, stove oil, range oil, lamp oil, gasoline, and alcohol.

d. Other fuel.—Check this box for fuels which cannot be classified into one of the specific categories listed in the item.

351. Item 15b. Type of refrigerator.—Determine and classify the refrigeration equipment used for the preservation and storing of food.

a. Electric, gas, or other mechanical refrigerator.—Mechanical refrigerators make their own ice and may be operated by electricity, gas, kerosene, gasoline, or other source of power.

b. Ice box or ice refrigerator.—These are nonmechanical and must be supplied with ice from an outside source.

c. Other refrigeration.—This category includes devices or methods such as a spring house, cooler, or well cooler

used to refrigerate food, an ice house in which storage space is provided for perishable food, and any evaporative cooler which is operated by a constant application of water.

d. None.—If the unit has no device for refrigerating food, check “None.” A window box, root cellar, open spring, or basement should be classified “None.”

352. Item 15c. Television set.—Check “Yes” for a television set even though it is temporarily out of order or is being repaired elsewhere.

353. Item 15d. Cooking fuel.—Check the one fuel that is used most for cooking. If two fuels are used for equal periods, check the one appearing first in the item. If the response is “gas,” ask whether it is “utility” or “bottled” gas. See paragraph 350 for a description of the various fuels.

Occupancy

354. Item 16. Occupancy.—A dwelling unit is occupied if people are living in it at the time of enumeration. A dwelling unit is also considered occupied if its occupants are only temporarily absent, as, for example, if the occupants are on vacation. A dwelling unit should be considered vacant if it has recently been sold or rented but the owners or renters have not yet moved in.

355. Occupied by owner.—A dwelling unit is “occupied by owner” if the owner or co-owner is one of the persons living in the unit (or absent from the household for a short period of time, such as, a family member in the armed forces or temporarily working away from home), even if he has not fully paid for the unit or has a mortgage on it. Consider a cooperative apartment unit as occupied by the owner if the owner lives in it.

356. Occupied by renter.—A unit is “occupied by renter” if any money rent is paid or contracted for.

357. Occupied rent free.—Units “occupied rent free” are those which are not occupied by the owner and for which no money rent payment is made or contracted. Such units are usually occupied rent free in exchange for services rendered, or sometimes the right to occupy the unit is the gift of a relative or friend who does not live in the unit. For example, a caretaker, farm worker, or a janitor, who receives

the use of a house or apartment as part of his wages, or a minister who receives the use of the parsonage as part of his salary, occupies the unit rent free. A tenant farmer who does not pay money rent should be reported as occupying the unit rent free. If a unit is occupied rent free, do not fill the remaining items on the line.

358. Occupied entirely by nonresidents.—If a dwelling unit is "occupied entirely by nonresidents," determine whether the nonresidents own the unit, pay rent for the unit, or occupy it rent free.

359. Vacant.—A dwelling unit, furnished or unfurnished, is vacant if no persons are living in it at the time of enumeration. Vacant dwelling units used only seasonally, or units which have recently been sold or rented, are to be considered vacant if no one is living in them at the time of enumeration. However, if you find a dwelling unit whose occupants are only temporarily absent (for example, away on vacation), enumerate it as occupied. (See also pars. 297 to 302.)

360. Vacant, under construction.—Enumerate vacant units under construction if construction has proceeded to the point where all exterior windows and doors have been installed and final usable floors are in place (see paragraph 299). Report each unit according to its expected status upon completion. For example, a dwelling unit that will be for rent when completed should be reported as "For rent." Similarly, if a house will be offered for sale only, it should be reported as "For sale only." If a house is being built by the owner for his own use, it should be reported as "Not for rent or sale."

361. Vacant, undergoing repairs, being remodeled or converted.—If a house or apartment is vacant because it is undergoing repairs, being remodeled or converted, enumerate each unit according to its expected status upon completion. For example, if a single-family house is being converted into two dwelling units which will be offered for rent, enumerate as two dwelling units for rent.

362. Vacant, for rent.—Include units which are offered for rent as well as those being offered for rent and for sale at the same time. A "For sale" sign does not always mean that the unit is not for rent also. Ask a neighbor if it is also offered for rent. (See also pars. 360 and 361.)

363. Vacant, for sale only.—Include only units which are for sale only and not for rent. If a vacant unit is located in a multidwelling unit structure which is "for sale only" as a whole structure, and the individual unit is not for sale and not for rent, report it as "Not for rent or sale." However, in a 2- or 3-dwelling unit structure which is "for sale only," there is usually a dwelling unit intended to be occupied by the owner. In such cases, report the vacant unit intended for the owner as "For sale only" unless it can be rented. (See also pars. 360 and 361.)

364. Vacant, not for rent or sale.—Some vacant units are neither for rent nor for sale. (See also pars. 360 and 361.) The following are examples of dwelling units being held off the rental or sale market.

a. Units that are rented or sold but not yet occupied by the new renter or owner.

b. Newly constructed units (as defined above) awaiting final completion which have already been rented or sold.

c. Units being held for settlement of an estate.

d. Units held off the market for personal reasons of the owner.

e. Units being used for nonresidential purposes — storage, etc., provided they are intended to be used only temporarily as such. If they have been permanently converted to storage or other nonresidential use, they are no longer living quarters and should not be enumerated.

f. Units in a multidwelling unit structure being held for sale of the entire structure.

Seasonal use of vacant units

365. Item 17. Vacant: nonseasonal or seasonal.—Classify vacant units according to the following definitions.

a. *Nonseasonal.*—Nonseasonal units are those which are intended for occupancy on a year-round basis. A dwelling unit located in the closely built-up area of a nonresort city is considered nonseasonal even though it may be occupied only part of the year. In resort areas, a unit which is usually occupied on a year-round basis is considered nonseasonal.

b. *Seasonal.*—Seasonal dwelling units are found primarily in resort areas and are intended for occupancy during only a portion of the year. In deciding whether vacation homes or other dwellings are seasonal, base your

decision on whether or not the unit is intended for occupancy on a year-round basis. In some farm areas certain dwelling units are used for only a portion of the year to house migratory workers employed during the crop season. Such vacant dwelling units are to be reported as "Seasonal."

In resort areas it may be difficult to determine the status of vacant units. In reporting the vacancy status of seasonal units in item 16 (see pars. 362 to 364), report the units as "For rent" if there is a rent sign, or "For sale only" if there is only a sale sign on the property. If there is no sign on the house and if the immediate neighbors do not know the status, report the vacant unit as "Not for rent or sale."

Monthly rent or sale price: nonfarm vacant units

366. Items 18 and 19. Explanation.—Fill these items for nonfarm vacant dwelling units. Enter amounts of money to the nearest whole dollar; do not show cents. If fifty cents or more, raise to one dollar; for example, report \$27.50 as "28."

367. Nonfarm units.—Nonfarm units are those for which an entry of "No" was made in item 4 on the Population side of the schedule, "Is this house on a farm (or ranch)?" Disregard item 5 on the Population side when identifying nonfarm units

368. Item 18. Monthly rent for vacant unit.—Report the rent asked, regardless of whether it includes furniture, heating and cooking fuel, electricity, water, or services. If rent is reported on other than a monthly basis, convert the amount to a monthly rate. For example, multiply weekly rents by $4\frac{1}{3}$, and semimonthly figures by 2, to compute the monthly rent. If the rent asked includes rent for a commercial unit in addition to the dwelling unit, report that part of the total rent which is estimated for the dwelling unit alone.

369. Rent for vacant seasonal unit.—If the dwelling unit is rented at different rates during different parts of the year (as is frequently true of dwelling units in resort areas), report the monthly rent at the time of enumeration. If the unit is rented for the season, divide the total seasonal rent by the number of months in the season.

370. Item 19. Sale price asked for vacant unit.—Enter the sale price asked by the owner for the property. If the property includes more than one residential structure, enter in a footnote the number of *dwelling units* in the property. Be careful to report the total price and not just the down payment.

Market value and mortgage: non-farm units occupied by owners

371. Items 20 to 22. Explanation — “this property”.—Fill these items for nonfarm dwelling units occupied by owners. See paragraph 367 for definition of nonfarm unit. Enter amounts of money to the nearest whole dollar.

Items 20 to 22 relate to *this property* of which the dwelling unit is a part, and not to the dwelling unit alone or to the structure alone unless these are identical with the property. Usually “this property” consists of the one structure and the lot on which it is located. However, the property may include an additional structure, such as a house on the back of the lot. In some multidwelling unit structures—cooperative apartment houses, for example—individual dwelling units in the structure are owned separately; in such cases, “this property” refers to the one unit which the respondent owns. Items 20, 21, and 22 must relate to the same property.

372. One dwelling unit occupied by owner.—If there is only one owner-occupied dwelling unit on this property, the market value of the property will represent the value of the entire property even though it may contain, in addition, dwelling units occupied by renters. For example, if the owner of property consisting of a two-dwelling-unit house lives in the first floor unit and rents out the second floor unit, report the market value for the whole property and not just the one dwelling unit the owner occupies; the entry in item 21 will be “2” to apply to the figure reported in item 20.

Even though there are co-owners living in the same dwelling unit, or even though one or more of the co-owners do not live on the property, report the market value of the entire property and the number of dwelling units in the entire property. For example, if two brothers own the property but only one brother lives on it, report the value of the entire property and not the one brother's share.

373. Two or more dwelling units occupied by owners.—If the property is owned jointly by two or more owners who occupy separate dwelling units on the property, the market value of the entire property should be reported for each owner even though the entire value of the property is thus reported more than once. For example, if two sisters and a brother are co-owners of a \$10,000 property consisting of three dwelling units, and each lives in a separate dwelling unit on the property, report “10,000” in item 20 and “3” in item 21 for each of the three dwelling units. The Census Bureau will tabulate values for such properties so that there will be no duplication in the final results.

374. Item 20. Value of property: non-farm owner.—Obtain this information whether or not the property is for sale. Enter the amount for which the property, including its land, would sell under ordinary conditions at the present time, not at a forced sale. This market value applies to whatever the respondent includes in “this property.” (See pars. 371 to 373.) If the respondent hesitates to answer this question, make it clear that these figures are confidential and cannot be used for purposes of taxation or assessment.

If the owner of the structure pays rent for the land, obtain the value of the structure plus an estimated value of the land on which it stands.

If the respondent says he has no idea what the property would sell for, ask if he knows of a sale of a similar property in the same neighborhood, and, if so, how the value of his property would compare with the one sold. If he has heard of no recent sale in the neighborhood, ask if he has heard of a similar property listed for sale or advertised in the newspapers or elsewhere. If you have not obtained a value by these methods, select about 3 groups of values such as \$4,000–\$6,000, \$6,000–\$8,000, or \$8,000–\$10,000 and ask in which group he thinks the value would fall. Your selection of value groups should depend on your best idea as to values in that neighborhood, but you should not reveal the amount any neighbor gave as the value of his property.

If the value stated is clearly far out of line, make sure that the respondent understood the question. If he repeats the same value, place a footnote by this figure and give your own estimate in the footnote. If the respondent has given a range of values without indicating at what value in this range he thinks his property would sell, enter the

average. For example, if the respondent gives a range of \$8,000 to \$10,000, enter “9,000.”

375. Item 21. Number of dwelling units included in property.—Enter the number of dwelling units included in the property for which the market value is reported in item 20. (See also pars. 371 to 373.) Usually you will have to ask several questions to determine how many dwelling units are included in the property. See the discussion on “dwelling unit,” paragraphs 287 to 302.

If “this property” refers to one structure, the number of dwelling units to be reported in item 21 (number of dwelling units included in this property) will be the same as the number in item 5 (number of dwelling units in the structure.)

If “this property” includes other structures containing additional dwelling units, the number reported in item 21 will be greater than the number reported in item 5.

If “this property” is only part of the structure, the number reported in item 21 will be less than the number in item 5. For example, for an owned unit valued at \$4,000 in a 25-dwelling unit cooperative apartment house, the entries would be “4,000” in item 20, and “1” in item 21; the entry for item 5 (number of dwelling units in the structure) would be “25.”

376. Item 22. Mortgage (trust) on property.—In asking this question, use the term “mortgage” or “trust” depending on local usage. If the term “mortgage” or “trust” is not understood, rephrase the question. You might ask if the property is still being paid for; if it is being financed, or the like. Check “Yes” if the indebtedness is in the form of a mortgage, trust, deed of trust, land contract, contract for deed, or contract for title. Check “No” if the only debt is in the form of a personal loan or note, court judgment, confession of judgment, FHA Title I loan for repairs, mechanic's lien, or tax lien. If the respondent indicates that he is “buying the property,” check “Yes.” Check “Yes” if the mortgage has been foreclosed but the period of redemption has not expired.

377. VA loan.—If the respondent says he has a “VA (Veterans Administration) loan or mortgage” or a “VA guaranteed loan or mortgage” on this property, check “Yes.”

378. FHA Loan.—If the respondent says he has an FHA mortgage or is buying the house through FHA, it can be assumed to be a mortgage. However, if the respondent says that he has an FHA loan which he used for repairs or improvements, it is necessary to find out whether or not it is a Title I loan for repairs.

FHA insured loans (Title I) for the purpose of repairs, property improvement, and conversion only are for a comparatively small amount of money (usually under \$500, although they may be for as much as \$5,000). They are short-term loans which are not longer than "7-year loans"; however, they usually run only about two years. These loans are not secured by a mortgage. If the only debt on the property is an FHA Title I loan of the type described, check "No."

Rent and utilities: nonfarm units occupied by renters

379. Items 23 to 26. Explanation.—Fill these items for nonfarm dwelling units occupied by renters; do not fill them for dwelling units occupied rent free. (See par. 367 for definition of nonfarm unit.)

Enter amounts of money to the nearest whole dollar; do not show cents. If fifty cents or more, raise to one dollar; for example, report \$31.50 as "32."

380. Item 23. Monthly rent for nonfarm renter unit.—Enter the rent contracted for, regardless of whether it includes furniture, heating fuel, electricity, cooking fuel, water, or other services sometimes supplied. If the dwelling unit is rented at different rates during different parts of the year (as is frequently true of dwelling units in resort areas), report the monthly rent at the time of enumeration. If rent is reported on other than a monthly basis, convert the amount to a monthly rate—multiply weekly rents by $4\frac{1}{3}$, semimonthly rents by 2, etc.

The rent reported should apply only to the dwelling unit which the renter occupies. If the rent actually paid by

him includes rent for dwelling units occupied by others (such as apartments which he sublets) report that part of the total rent which he estimates for his one dwelling unit, including any rented rooms which are a part of his one dwelling unit. For example, a renter pays \$75 monthly for an unfurnished house in which he occupies the first floor unit and rents out two small furnished apartments on the second floor for \$40 each. The renter estimates the rent for his first floor unit to be about \$50 of the \$75 which he pays for the entire house.

Similarly, if the rent actually paid includes rent for a business unit in addition to a dwelling unit, report that part of the total rent which the renter estimates for the dwelling unit alone.

381. Items 24, 25, and 26. Explanation.—The actual rents paid are not comparable for all dwelling units because some of the rents include the cost of utilities and furnishings. The purpose of the questions in items 24, 25, and 26 is to secure information which will enable us to place all rents on a comparable basis by including the cost of utilities (electricity, gas, water, heat, or fuel) and excluding the cost of furnishings. Fill these items for nonfarm units occupied by renters.

382. Item 24. Amounts paid for utilities and fuel: nonfarm renter units.—These questions apply to the one dwelling unit in which the renter lives. If a part of the rented space consists of other dwelling units or a business unit, the cost of utilities should be estimated for this dwelling unit only. The amounts are not to be obtained if the unit is occupied rent free.

Make sure that the amounts you enter as the cost of electricity, gas, and water represent an average monthly figure for all seasons of the year, and that the reported cost of wood, coal, and oil represents a total for the past 12 months for all of these fuels. Check "Nothing paid" if respondent does not use the item specified, if the item is included with the rent, or if it is obtained free.

Report the cost of these items, even though the bills may be unpaid or may have been paid for the respondent by someone else, such as a welfare agency. If the respondent has lived in this unit for only part of the past 12 months, ask him to estimate the cost for this unit on a yearly basis. If a part of the cost is included in the rent, report only the amount paid by the respondent. If two or more utilities, such as gas and electricity, are billed together, enter one figure and bracket the combination.

"Wood, coal, and oil" are used broadly here to include cord wood, kindling, hard and soft coal, lignite, briquets, coke, fuel oil (distillate or residual oil), kerosene (coal oil), bottled gas, alcohol, gasoline, and the like, which are used for heating or cooking. Costs of fuels used for pumping water or generating electricity should be included in the wood, coal, and oil item.

383. Item 25. Rented unfurnished or furnished.—A dwelling unit is rented "furnished" if the rent reported in item 23 includes payment for the use of major pieces of furniture—beds, tables, and chairs. Stoves and refrigerators are not to be considered furniture.

384. Item 26. Monthly rent on unfurnished basis.—Ask the question if the unit is rented furnished (checked as "Furnished" in item 25). In most cases, the renter will not know exactly what the landlord would ask for the dwelling unit if it were rented unfurnished. For such units, this figure is expected to be an estimate. The estimate may be based on (1) the amount of rent received for similar units rented unfurnished in the same structure or neighborhood, or (2) the rent paid minus a reasonable rental value for the furniture. In some cases, the furniture may be judged worthless and the rent unfurnished may be estimated to be the same as that paid for the unfurnished unit.

POPULATION ITEMS

The following include only those population items which relate to the housing census.

74. Persons to enumerate in each household.—Count as members of the household (see par. 104) the following:

a. Members of the household living at home at the time of the enumeration.

b. Members of the household temporarily absent at the time of the enumeration, on vacation, visiting, or on business.

c. Members of the household who are in a hospital but who are expected to return in a short period of time. (See par. 80*h*.)

d. New-born babies who have not yet left the hospital.

e. Members of the household attending a school below the college level and residing in other ED's. (Student nurses and students at the college level will be enumerated in the ED in which they are living while attending school.) (See pars. 78*c, d* and 80*d, e*.)

f. Domestic or other employees who live with the household, sleeping in the same dwelling unit. (See par. 80*b*.)

g. Boarders or lodgers who regularly sleep in the dwelling unit. (See par. 80*c*.)

95. Item 4. Rural and urban areas.—In rural areas, in general, let the respondent decide whether his house is on a farm. In urban areas you may usually obtain the answer to this question by observation. In urban areas there will occasionally be a tract of land called a farm. In such areas, ask only if you are in doubt as to whether the place might be considered a farm.

96. Two or more houses on a place.—In rural areas more than one house may be on a place requiring an Agriculture Questionnaire. Let the respondent at each dwelling unit decide whether his house is on a farm, except as noted in paragraphs 97 to 99 below. In a few cases you may have different answers from the separate households as to whether a given place is a farm. Do not change the entry in item 4 because of different answers given by respondents at different dwelling units or because of answers to later questions.

97. House rented separately from farm.—Enter "No" in item 4 for a house on a farm which is occupied by persons who pay cash rent for the house and yard only. For example: Mr. B, who works in the city, lives in a house on Mr. A's farm, and pays \$40 a month cash rent for the house and

yard only. Mr. A says he lives on a farm. Report "No" in item 4 for Mr. B's house and "Yes" in item 4 for Mr. A's house.

98. Institutions.—Enter "No" for an institution even if agricultural operations are conducted on the place.

99. Summer camp or tourist cabin.—Enter "No" for summer camps, motels, and tourist cabins.

103. Item 7. List all members of household.—Enter in this column the name of each person whose usual place of residence is with the household. Be sure to include persons temporarily absent, and all children, even the very youngest. Do not include persons visiting the family who have a usual place of residence elsewhere. See instructions on persons to be enumerated (pars. 68 to 80).

104. Definition of household.—A household is the entire group of persons who live in one dwelling unit. It may be several persons living together or one person living alone. It includes the household head and all his relatives living in the dwelling unit and also any lodgers, maids, and other persons not related to the head, who live there.

When you start to enumerate at each address, you will have to find out how many dwelling units there are so you will know how many different households you must list. Usually you will have no trouble in determining what is a separate dwelling unit; for example, a house or regular apartment occupied by a single family or by a person living alone is easily recognized as a separate dwelling unit. However, in a house converted to light housekeeping rooms or sleeping rooms, it may not be easy to determine what rooms, or groups of rooms, constitute one dwelling unit. Generally, a sleeping room is not a separate dwelling unit, but a room or group of rooms is a separate dwelling unit if it has separate cooking equipment. (See also "Dwelling unit," pars. 287 to 302.)

114. Item 9. Determining and entering race.—Write "W" for white; "Neg" for Negro; "Ind" for American Indian; "Chi" for Chinese; "Jap" for Japanese; "Fil" for Filipino. For a person of any other race, write the race in full. Assume that the race of

related persons living in the household is the same as the race of your respondent, unless you learn otherwise. For unrelated persons (employees, hired hands, lodgers, etc.) you must ask the race, because knowledge of the housewife's race (for example) tells nothing of the maid's race.

115. Mexicans.—Report "white" (W) for Mexicans unless they are definitely of Indian or other nonwhite race.

116. Negroes.—Report "Negro" (Neg) for Negroes and for persons of mixed white and Negro parentage. A person of mixed Indian and Negro blood should be returned as a Negro, unless the Indian blood very definitely predominates and he is accepted in the community as an Indian. (Note, however, the exceptions described in par. 118 below.)

117. American Indians.—Report "American Indian" (Ind) for persons of mixed white and Indian blood if enrolled on an Indian Agency or Reservation roll; if not so enrolled, they should still be reported as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indians in the community where they live. (See par. 116 for persons of mixed Indian and Negro blood and also exceptions noted in par. 118.) In those counties where there are many Indians living outside of reservations, special care should be taken to obtain accurate answers to item 9.

118. Special communities.—Report persons of mixed white, Negro, and Indian ancestry living in certain communities in the Eastern United States in terms of the name by which they are locally known. The communities in question are of long standing and are locally recognized by special names, such as "Croatan," "Jackson White," "We-sort," etc. Persons of mixed Indian and Negro ancestry and mulattoes not living in such communities should be returned as "Negro" (see par. 116). When in doubt, describe the situation in a footnote.

119. Mixed parentage.—Report race of nonwhite parent for persons of mixed white and nonwhite races. Mixtures of nonwhite races should be reported according to the race of the father. (Note, however, exceptions detailed in pars. 116 and 118 above.)

↑ FIGURE 1.—A critical deficiency—loose and missing material over a considerable area of the outside wall. This *dilapidated* house is no longer weathertight. Where the clapboards are loose and missing, there is nothing to prevent the rain from beating in and rotting the interior construction.

↓ FIGURE 2.—A close-up of loose and warped clapboards, so often seen in dilapidated structures. Outside walls in this condition do not provide adequate protection against the elements, and if present over a considerable area, are enough to classify the house as *dilapidated*.

↑ FIGURE 3.—A *dilapidated* house. This house has been partially covered with tarpaper shingles but a glance at the uncovered section indicates the true condition of the outside wall.

↓ FIGURE 4.—A critical deficiency—loose and rotted floorboards over a considerable area. Floors in this condition are not only significant in themselves but also are indications of other defects which cannot readily be seen. If you see floorboards in this condition, classify the house as *dilapidated* without looking further for other defects.

↑ FIGURE 5.—Another critical deficiency—plaster missing over a large area of an inside wall. This is sufficient in itself to classify the house as *dilapidated*.

↓ FIGURE 6.—Extensive damage by fire. Units extensively damaged by fire, storm, or flood, which are not being repaired, should be considered *dilapidated*.

↑ FIGURE 7.—A combination of minor deficiencies—loose bricks, a missing sill, and rotted window sash and frame. These deficiencies are not only serious in themselves but are indications of the general deterioration of the entire house. Together, these deficiencies are serious enough to classify the house *dilapidated*.

↓ FIGURE 8.—Another example of minor deficiencies—deep wear on the door sills, loose bricks, and rotted window frame and sash. These deficiencies are sufficient in number and extent to indicate that the house no longer provides adequate shelter and therefore is *dilapidated*.

FIGURES 9 AND 10.—Two pictures of the same house. On the outside you see the run-down front steps and porch. These are insufficient to classify the unit as dilapidated but warn you to look further. Inside you see that the interior also is in disrepair. In combination, these deficiencies are sufficient to classify the unit *dilapidated*.

↑ FIGURE 11. — Makeshift living quarters in a cellar. These quarters are damp and dark, and are a dangerous place in which to live. They do not satisfy the minimum requirements of decent or safe housing and should be included in the *dilapidated* category.

↓ FIGURE 12.—Makeshift and inadequate original construction. Notice the various kinds of inferior material used to make this house. This unit should be classified as *dilapidated*.

FIGURE 13.—A good house which lacks only paint. It is *not dilapidated*. Remember the caution in your instructions that the mere lack of paint does not justify classifying a unit as dilapidated. →

↓ FIGURE 14.—The rear of a structure. Units like this should be considered *dilapidated* even though they appear in good condition from the front. If opportunity affords itself, appraise the house from the rear.

FIGURES 15 AND 16.—A house which is *not dilapidated*. In the top picture you can see only one or two indications of deterioration. Likewise, although the interior of the house is drab and dingy, nothing can be seen in the bottom picture to justify classifying the house dilapidated.
